My Story: I'm Not a LinkedIn Influencer, and That's the Point

How to Use This Book

Chapter 1: Stop Chasing Viral

Chapter 2: What Viral Posts Can (and Can't) Teach You

Chapter 3: The Anatomy of a Useful Post

Chapter 4: The Hook

Chapter 5: The Rehook

Chapter 6: The Seven Post Engines

Chapter 7: Write Like a Person Who Understands the Work

Chapter 8: Stories That Help Buyers Decide

Chapter 9: The Right-Person Principle

Chapter 10: The Authority Equation

Chapter 11: The Problem-Awareness Ladder

Chapter 12: The Four Posts Every Business Needs

Chapter 13: CTAs That Create Conversations

Chapter 14: The Lead Magnet Post

Chapter 15: Turning Comments Into Conversations

Chapter 16: The Profile-to-Post Conversion System

Chapter 17: From Content to Client

Chapter 18: Build Your Content Pillars

Chapter 19: The 30-Day Lead Plan

Chapter 20: The Post Creation Workflow

Chapter 21: Measuring What Actually Matters

Chapter 22: 50 Hook Templates

Chapter 23: 25 Rehook Templates

Chapter 24: 25 High-Converting Post Structures

Chapter 25: The Viral-to-Lead Swipe File

Chapter 26: Your 30-Day Implementation Challenge

Conclusion: Stop Going Viral. Start Becoming Unmissable.

ABOUT THE AUTHOR

Mayank Mishra is the founder of ThriveXLabs (TXL), where he builds and runs outbound-led sales and demand-generation systems for B2B businesses. He started his career at Garmin, then built and scaled two EdTech platforms on organic growth. Most recently he ran growth for an expert marketplace that reached 12.5k users in three months: over 1,000 consultants onboarded without a big ad budget, and a 46% reply rate across 11,466 cold LinkedIn DMs. He writes about growth, positioning and demand generation for over 7,000 followers on LinkedIn and 13,000 on Substack. He is also the author of *The Non-Salesy DM*.

MY STORY: I'M NOT A LINKEDIN INFLUENCER, AND THAT'S THE POINT

Let me be upfront about something most LinkedIn books won't tell you.

I'm not a LinkedIn celebrity. I don't have hundreds of thousands of followers. Most of my posts reach a few hundred people. If you bought this book hoping to learn how to get a million impressions, I'm the wrong author, and it's the wrong book.

What I *have* done is build demand. I've scaled two EdTech platforms on organic growth. And this year I ran growth for an expert marketplace that reached **12.5k users in three months**. We onboarded over a thousand consultants without spending millions on ads. The first 1,000 sign-ups took months. **The next 1,000 came in seven days.**

That work put me in an unusual position. I wasn't just writing posts. I was working with a thousand-plus consultants, coaches and freelancers who were trying to turn *their* expertise and content into clients, and I could see what actually moved.

Here's what I saw:

Reach didn't predict results.

When we sourced experts, the accounts with the biggest followings (20,000+) often converted *worse* than people with a few thousand engaged followers. Many were already monetizing elsewhere. Big audiences looked attractive and behaved differently than we expected.

And one of the cleanest wins I saw had nothing to do with virality. An expert on the platform added a booking link to a single, specific LinkedIn post, one that clearly explained one problem for one kind of buyer, and got a booking from it. No funnel. No sequence. The right person read it, recognized their problem, checked the profile, and acted.

That's the whole book in one story.

Why I Wrote This Book

Most LinkedIn content advice is built around one number: reach. Hooks to stop the scroll. Formats that "the algorithm loves." Templates that went viral for someone else. Some of that craft is genuinely useful, and you'll find the best of it in these pages.

But reach is the wrong finish line. I've written it in my own notes more times than I can count: *reach, likes and impressions are leaky buckets.* A viral post is a crowd that gathers for ten seconds. What matters is whether any of them walk somewhere afterward.

And most founders I work with don't have a lead-generation problem. They have a **relevance** problem. They're getting attention from people who will never buy, while the few people who would buy can't tell what they do.

So this book makes a different promise:

> ***You don't need millions of followers to generate serious business from LinkedIn. You need to consistently earn attention from the right people, show that you understand their problem, and give them a reason to start a conversation.***

That's what I call **qualified attention**, and it's what this book teaches you to build: an engine that turns useful posts into relevant conversations, and relevant conversations into clients.

It pairs with my other book, *The Non-Salesy DM*. That one covers what happens once a conversation starts. This one covers how the right conversations start in the first place.

Mayank Mishra
Founder, ThriveXLabs

HOW TO USE THIS BOOK

The system in one page. Two linked frameworks run through the whole book:

- **V.I.R.A.L.** is the work *inside* a post: **V**oice (sound like a human who understands the work), **I**ntrigue (earn the next line), **R**elevance (make the right reader see themselves), **A**uthority (give them grounds to believe you), **L**esson (leave them better equipped to act).
- **L.E.A.D.** is the work *after* the post: **L**ead (create a reason to continue the relationship), **E**ngagement (start a real exchange), **A**lignment (check whether your help fits), **D**iscovery (move the right people into a business conversation).

Every post is built on one architecture: **Hook → Rehook → Body → Payoff → CTA.** And one editing checklist, **V.A.L.U.E.** (Visibility, Attention, Legitimacy, Usefulness, Engagement-to-Action), is your final pass before you publish.

How to read it.

1. Parts I–IV in order: they change what you write about and why.
2. Part V to build your operating system.
3. Keep Part VI (the Playbook: hooks, rehooks, post structures and annotated examples) open while you write.

What comes with this edition. The **Implementation System**: the Content Engine Tracker (a spreadsheet with a problem bank, post planner, proof ledger, 50-hook bank, 30-day challenge and honest metrics), the **AI Post Coach** (turns a buyer problem into briefs, hooks and drafts using this method, without ever inventing your experience), and the printable **Field Kit**.

A note on evidence. This book's frameworks are practical writing and planning tools, not discoveries about LinkedIn's ranking algorithm, and nothing here guarantees reach or revenue. The concept behind the book drew on a large study of viral LinkedIn posts. Its underlying dataset and method weren't available for verification, so I don't cite its numbers as proof. Where I describe what LinkedIn has said about its feed, I cite LinkedIn directly. Named businesses, figures and first-person stories in the teaching examples are illustrative unless I say they're mine. Where I use openings from my own posts, I say so.

The one rule for the whole book: optimize for qualified attention, not maximum attention.

CHAPTER 1: STOP CHASING VIRAL

> *Don't maximize attention. Maximize valuable attention.*

Two posts from the same consultant, one week apart.

Post A is a story about perseverance: the year everything went wrong and what it taught her. Thousands of people recognize themselves in it. 80,000 impressions. 1,900 reactions. 300 comments, most of them some version of "So needed this today."

Post B explains why agency proposals stall after a verbal "yes": usually because nobody owns the internal decision. 4,000 impressions. 60 reactions. 11 comments. Two of those comments are agency founders describing that exact problem in their own business. One sends a DM that becomes a paid project.

(Illustrative example.)

By every number on the dashboard, Post A won. By the only number that pays for anything, Post B won. And the consultant's natural reaction, "write more posts like A," is exactly the wrong lesson.

Viral ≠ valuable

Most people believe LinkedIn content has one job: get engagement. That belief quietly shapes everything: the topics you pick, the hooks you write, the posts you repeat.

But a post can be widely shared because it's funny, moving, controversial or culturally familiar. None of those qualities tells you whether its readers have a problem you solve. **Reach creates possibilities. Audience, meaning and the next step decide which possibilities are useful.**

VANITY LINKEDIN VS. BUSINESS LINKEDIN

Vanity LinkedIn optimizes for…	Business LinkedIn optimizes for…
More impressions	More *relevant* impressions
More likes	More authority with the right people
More followers	More profile visits from potential buyers
More comments	More qualified conversations
A viral post	Opportunities, and eventually revenue

A viral post is a crowd that gathers for ten seconds. The engine is what decides whether any of them walk somewhere afterward.

The two equations

It helps to think of it this way:

Viral content ≈ Attention × Relevance × Value × Emotion × Distribution

Qualified leads ≈ Reach × Audience fit × Authority × Problem awareness × Trust × Conversion path

Figure 1. The two equations. They're diagnostic reminders, not arithmetic. The terms don't share units.

The point isn't to calculate anything. It's that the second equation contains **every weak link that more reach can't fix**:

- The wrong people respond? Fix **audience fit** and topic.
- The right people read but can't explain what you do? Fix **authority** and positioning.
- Readers ask good questions but never progress? Fix the **conversion path**: your offer, your next step, your replies.

More impressions can't repair any of those. That's why doubling your reach so often doubles the noise, not the pipeline.

Qualified attention

This book's central unit is **qualified attention**: attention from people whose situation makes your expertise relevant.

Some of them will buy. Some will influence a purchase, introduce you to someone, or remember you months later. Others will learn something useful and leave. A good engine serves all of them honestly, while making the commercial path obvious to the right ones.

The goal isn't to get 100,000 people to like your post. It's to get the right 100 to 1,000 people to think: **"This person understands my problem. I should talk to them."**

Define useful success before you write

Give every post one **primary job**:

- **Attraction:** introduce a relevant idea to new, relevant people.

- **Authority:** make your thinking more credible.
- **Relationship:** deepen understanding or invite worthwhile discussion.
- **Conversion:** help an appropriate reader take a defined next step.

Then judge the post by *its* job. Don't change the definition of success after you publish. If a conversion post earns likes but no interest in the offer, the likes don't retroactively become the goal. And if an authority post helps one real prospect resolve an objection, low reach doesn't make it a failure. (Chapter 12 turns these four jobs into a posting mix.)

A **qualified opportunity** is much more demanding than an interaction. In this book it means an identifiable person or organization with a relevant problem, a plausible fit with your offer, a credible path to a decision, and an agreed next step. A download is not an opportunity. A complimentary comment is not an opportunity.

The transformation

You start as someone who asks *"What should I post?"* By the end of this book you'll know:

1. How to create **attention**
2. How to create **authority**
3. How to attract your **ideal buyer** specifically
4. How to run a **repeatable content system** that produces conversations and leads

It's less a writing book than a LinkedIn **demand-generation** playbook that happens to be about writing.

Action: your content objective

Write one sentence:

> *"Over the next 30 days, I want **[specific audience]** to recognize **[specific problem]** and consider **[appropriate next step]**."*

Then list three signals of progress you can actually observe (relevant replies, resource use, substantive DMs, fit conversations) and one commercial outcome you'll track over a longer period.

- ☐ One primary audience is named.
- ☐ The problem is specific enough to recognize in a real conversation.
- ☐ The next step is useful even if the reader never buys.
- ☐ Success includes audience *quality*, not reach alone.

Field rule: A post that reaches 4,000 of the right people beats one that reaches 80,000 of the wrong ones.

CHAPTER 2: WHAT VIRAL POSTS CAN (AND CAN'T) TEACH YOU

> ***Study the decisions behind a post, not its surface.***

Studying successful posts is useful when you study *decisions*: how the writer introduced a problem, set the stakes, supplied evidence and rewarded the reader. It's much less useful when you copy surface patterns and assume they caused the result.

The survivorship trap

A dataset made up only of viral posts can tell you what appears among viral posts. Without a comparison group, it can't tell you whether the same features appear in thousands of ignored posts too.

If most winning posts use "I" and "you," that doesn't prove adding "I" creates reach. The author's audience, topic, timing, reputation and existing distribution all explain part of the difference. Personal, conversational writing is very often good *writing*. Just don't mistake a correlation in winners for a lever you can pull.

The research quality filter

Before you adopt any "LinkedIn study says…" claim, ask:

- Who collected the data, and when?
- How were posts selected? What counted as "viral"?
- Was paid promotion excluded?
- Did it compare similar authors and topics?
- Was the outcome reach, engagement, leads or revenue? (These are not interchangeable.)

The large viral-post study behind this book's original concept couldn't pass this check, because its dataset and method weren't available to me. You don't need to wait for perfect research to write better posts. You *do* need to stop treating unverified figures as proof, including the ones in viral threads about LinkedIn itself.

What LinkedIn has actually said

LinkedIn has publicly described feed changes intended to favor relevant professional content and reduce generic, recycled posts and **engagement bait** (empty "agree?" or "comment YES" prompts). It has also said it acts against **engagement pods** and **automated comments** as inauthentic activity.

That supports a sensible emphasis on relevance and substance. It does *not* reveal a dependable trick for making any particular post travel. And none of it establishes a universal best posting time, a mandatory "first-hour" reply window, an ideal line count, or a guaranteed penalty for every external link. Treat those claims as hypotheses to test, not laws.

Craft principles vs. ranking guesses

Craft principle (helps readers)	Ranking guess (treat as a hypothesis)
Short paragraphs make a dense argument easier to scan	"Short lines get boosted"
A personal scene makes an abstract issue concrete	"Stories always go viral"
A clear opening helps the reader decide to continue	"The first line is all the algorithm reads"
Put a link where it best serves the reader	"Links always kill reach"

External links are a good example of confused reasoning. A link asks readers to leave the feed, so posts with links may perform differently. That alone doesn't prove an algorithmic penalty. Put the link where it serves the reader, test for your own objective, and never bury an essential resource just to obey folklore.

Give good work a realistic route to readers

Distribution starts before you publish:

- **Connect with people whose work you can contribute to.** A smaller network with shared professional context beats a large pile of unrelated contacts. Don't send connection requests that hide a prepared pitch. (That's the whole subject of *The Non-Salesy DM.*)
- **Comment like a contributor.** Add an example, a useful distinction or a well-formed question. "Great post!" repeated across the feed gives nobody a reason to look at your work.
- **Make posts easy to pass along privately.** Ask: *who would send this to whom, and what sentence would they write when they did?* "Our team needs to decide this before the launch" is a much stronger distribution reason than "this person wants reach."
- **Use your existing channels honestly.** Reference a relevant post in your newsletter or in an agreed client follow-up. Never ask a group to simulate independent enthusiasm. That's a pod, and pods are exactly what LinkedIn says it acts against.

- **Collaborate with substance.** A joint post between a sales-process consultant and an agency operations lead can expose trade-offs neither would explain alone. Agree the topic, permissions and credit first.

For new accounts: the first problem is usually limited exposure, not weak writing. Spend part of your first month finding where your buyers already discuss the problem, and participate usefully there. Don't treat low early reach as proof you need a more sensational hook.

Build your own small evidence base

Your best data is your own. Review ten of your posts with a similar audience and purpose. Record topic, format, opening, proof, CTA, reach, **relevant** responses and opportunities. Look for patterns, then test one change across several comparable posts.

Don't call a three-post difference conclusive. And if you're starting from zero, build a baseline instead of borrowing someone else's. Those early conversations are research even when the analytics look flat.

Action: audit one "rule"

Pick one popular LinkedIn writing rule you currently follow. Write down:

1. The claim
2. Its source
3. An alternative explanation for why it might seem to work
4. A practical test

Replace "LinkedIn always rewards this" with "I'll test whether this helps my readers and my objective."

Field rule: Copy decisions, not decorations.

CHAPTER 3: THE ANATOMY OF A USEFUL POST

> *Hook → Rehook → Body → Payoff → CTA.*

Every useful LinkedIn post has a coherent movement. These are **functions**, not boxes of equal size. A short post may combine several in one sentence. A case study may need room to set up context before its lesson is believable.

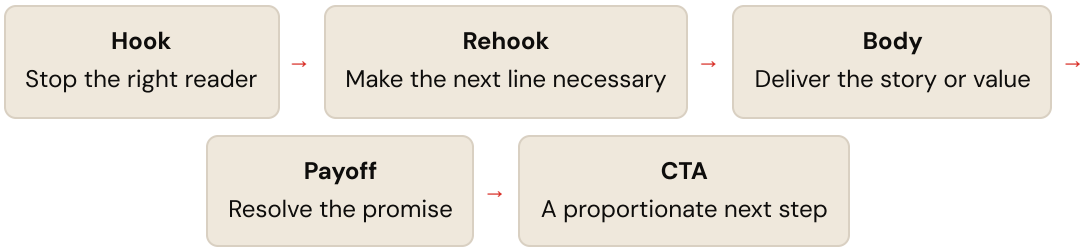

Figure 2. The Attention Architecture, the structure used throughout this book.

When one part contradicts another (a big hook with a thin body, a helpful post with a pushy CTA), the post feels manipulative even if every sentence is polished.

A complete miniature

Your proposal may be waiting for a decision nobody owns.

Before rewriting the pricing page, check what happened after the last call.

Was one person responsible for taking the recommendation to their team? Was there a date for that conversation? Did you agree what the other decision-makers would need?

"They liked the proposal" is a reaction.
"The ops lead reviews scope with the founder on Thursday" is a next step.

On your next sales call, finish by confirming the decision, the owner and the date. If any of them is unknown, write that down instead of treating the deal as close to won.

Which of those three is usually missing in your pipeline?

Function	What it does here
Hook	Names a specific, recognizable failure
Rehook	Redirects from the familiar response (rewrite the price) to the real check
Body	Three questions the reader can run on their own pipeline
Payoff	A memorable contrast (reaction vs. next step) plus one concrete habit
CTA	Invites relevant experience, not agreement

The promise–payoff contract

Before drafting, write the promise in plain language: *"This post will help an agency owner tell a pricing objection apart from an unclear decision process."* Then check every paragraph against it.

- If the hook promises a pricing diagnosis and the body turns into a speech about confidence, the contract is broken.
- If the hook promises five steps, deliver five usable steps.
- If it implies measured results, show the measurement context.

Never withhold the promised answer to force a DM. Give the insight publicly. Offer a resource or service that makes *implementation* easier, broader or more tailored. Readers can tell the difference between a post that teaches and a post that teases, and only one of them builds authority.

V.I.R.A.L. inside the post

The architecture tells you the order. V.I.R.A.L. tells you what each part must contain:

	Question to ask	Lives mostly in…
Voice	Does this sound like a person who understands the work?	Everywhere
Intrigue	Would the right reader need the next line?	Hook, rehook
Relevance	Would my buyer recognize themselves?	Hook, body
Authority	What here gives them grounds to believe me?	Body
Lesson	What can they now do or decide?	Payoff

After the post, **L.E.A.D.** takes over (Chapters 13–17): create a reason to continue (**Lead**), start a real exchange (**Engagement**), check fit (**Alignment**), and move the right people into a business conversation (**Discovery**).

Match the format to the reader's task

- **Text** for an argument, a short story or a focused explanation.
- **A simple image** for a comparison or diagnostic people grasp at a glance.
- **A document (carousel) post** when a sequence benefits from separate pages.
- **Video** when a demonstration or spoken explanation is materially clearer.

These are communication choices, not rankings of algorithmic superiority. Design for legibility: one main idea per visual, readable labels, real contrast. A tiny spreadsheet screenshot isn't proof if nobody can read it.

Action: five sentences first

Write one sentence for each of the five functions. Expand only the body until it delivers the promised lesson. Then read the hook and the payoff one after the other. They should make a sensible pair on their own.

> **Field rule: The hook makes a promise. The body keeps it. Don't write checks the post can't cash.**

CHAPTER 4: THE HOOK

> *Win the first two seconds with the right reader, not every reader.*

The opening line has one job: help a suitable reader recognize either **their situation** or **an interesting implication**. It doesn't need to shout louder than every other post. It needs to make the next sentence worth the right person's effort.

A hook needs three things:

1. **A subject:** what this is about.
2. **A reason to care:** why it matters to someone.
3. **Enough specificity** not to sound interchangeable.

"Marketing has changed" has a subject and nothing else. "Your demo-request form may be filtering out the buyers with real urgency" has a problem, a mechanism and an obvious person who should care.

Eleven ways to open

Type	What it does	Example
Problem	Names an observable difficulty	"Your proposals go quiet after procurement joins."
Curiosity	Opens a meaningful gap	"The busiest stage in your CRM may be the least understood."
Contrarian	Challenges a belief, with a boundary	"More discovery questions can make a simple purchase harder."
Personal story	Starts at the decision or consequence	"I rewrote the offer before checking who was reading it."
Transformation	Contrasts a real before and after	"The handoff went from a Slack message to a named owner and deadline."
How I	Reveals a process you actually use	"How I turn one buyer objection into three useful posts."
Mistake	Identifies a correctable action	"A common proposal mistake: explaining scope before confirming who decides."
Confession	Admits a relevant misconception	"I used to treat every resource request as a sales lead."
Data	Leads with a supported finding	"In our last 40 inquiries, one question came up 23 times." *(only with real, sourced numbers)*

Type	What it does	Example
Prediction	A reasoned forecast with conditions	"If buyers can compare your process before a call, discovery calls need a new job."
Direct address	Names the reader and circumstance	"Agency founders who still approve every proposal: read this before hiring another salesperson."

From my own feed

Here are openings from posts I've written, so you can see these types in a real voice:

- **Problem / reframe:** *"Most freelancers don't have an income problem. They have a pipeline problem."*
- **Contrarian:** *"We chase reach as if it were the finish line, then wonder where the revenue went."*
- **Scene:** *"'Can we just have a quick call?' Every consultant has heard this one."*
- **How I:** *"Here's how I'd market a startup with a $0 ad budget…"*
- **Confession (with humor):** *"Nothing keeps a growth marketer humble like a dashboard."*
- **Research:** *"I analyzed 100+ AI tools, consultant workflows, founder recommendations and AI communities to answer one question…"*
- **Comparison:** *"There are 2 types of AI consultants on our platform right now. (And only one of them consistently gets businesses interested.)"*
- **Personal story:** *"If you only saw my job titles, you'd miss the story."*

Notice that each one tells a specific reader, like a freelancer, a consultant or a founder, that this post is for them.

The 15-word test

Try expressing your hook's core idea in 15 words or fewer. This is a compression exercise, not a LinkedIn rule. If the shorter version drops an essential qualifier or becomes misleading, keep the qualifier.

Draft ten hooks before choosing one. Vary the *angle*, not the adjectives: the symptom, the consequence, the decision, the common response, the overlooked constraint, the evidence, the misconception, an example, a question, a practical promise. Then pick the one most clearly connected to the body.

Repair the overclaim

Weak	Better	Why
"This one trick will double your leads."	"Before posting more, check whether buyers can tell what you sell."	A smaller promise you can actually deliver

Weak	Better	Why
"Nobody talks about this sales secret."	"A signed proposal still needs a clear handoff into delivery."	Removes fake exclusivity; makes the issue concrete
"I almost lost everything."	"I sent the proposal before confirming who would approve it."	True and relevant beats dramatic and vague

A hook that needs exaggeration to stay interesting is telling you the idea underneath is weak. Strengthen the idea.

Action: ten hooks, two finalists

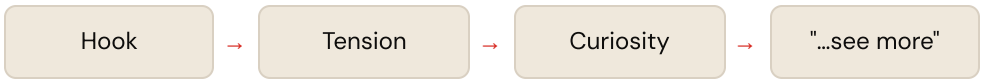

For your next post, write ten hooks across different angles. Score each as clear / partly clear / unclear on three things: **audience**, **problem** and **deliverability** (can the body keep this promise?). Discard any that need exaggeration. Take two finalists to one person in your audience and ask what they expect the post to explain.

Field rule: A great hook makes the right reader stop and the wrong reader keep scrolling. Both are wins.

CHAPTER 5: THE REHOOK

> *Most people obsess over line one. Experts engineer lines one to three as a unit.*

The **rehook** is the sentence or short passage right after the hook that makes the opening worth continuing. On LinkedIn it usually decides whether someone taps "...see more." It's one of the most under-taught skills in post writing.

A good rehook **adds information**. Repeating the hook in more dramatic language only delays the answer.

> I almost quit my business.
>
> Not because it was failing.
>
> Because it was succeeding in the wrong way.

The second and third lines turn a generic confession into a specific, intriguing tension: *what does succeeding the wrong way mean?* Now "see more" is an informed choice. (Use this shape only for a true story.)

Consider: "Your marketing report can improve while your pipeline gets weaker." A useful rehook: "That happens when the dashboard rewards activity your buyers don't use to decide." It names a mechanism. "You won't believe what happens next" adds nothing.

Three dependable moves

- **Narrow:** "This matters most when the founder still approves every proposal." It helps the right reader recognize themselves, and lets everyone else leave without wasting their time.
- **Complicate:** "The team may be following the process exactly. The process may be missing the decision." It earns attention by improving the diagnosis, not by adding suspense.
- **Preview:** "Here are three places to check before you change your price." It sets an honest expectation and a clear scope.

You can combine them. But don't build a five-line runway for a two-line insight. If the opening takes longer than the lesson, compress.

Design for the visible opening, without gaming it

How much of a post shows before "see more" varies by device, format and interface, so don't assume a fixed number of lines. Make your first short passage make sense on its own, and preview it in the interface you publish from.

Don't withhold the entire topic. A mystery opening earns curiosity from people who have no reason to care, and frustrates the ones who do. The rehook should give enough context that clicking "see more" is an informed yes.

Worked repair

- **Draft:** "I made a huge mistake. It cost me everything. Here's what happened." Unless every word is true and relevant, this is inflated and empty.
- **Revision (true experience):** "I sent the proposal before confirming who would approve it. The next two calls repeated a conversation I thought we'd finished." Now the reader knows the situation, the consequence and the likely lesson.
- **Revision (no personal story available):** "Sending a proposal before you know who approves it creates an avoidable risk: you may be presenting the answer to someone who still needs help framing the problem." That's an argument, not a fabricated memory. Both work.

Action: three rehooks per hook

For your chosen hook, write three rehooks: one that **narrows**, one that **complicates** and one that **previews**. Pick the one that adds the most meaning. Read the hook and rehook aloud together, and cut any line that could be pasted under twenty unrelated hooks.

> **Field rule: The hook earns a glance. The rehook earns the read.**

CHAPTER 6: THE SEVEN POST ENGINES

> *Choose the engine by your material, not your mood.*

An **engine** is a reusable way of organizing a useful idea. It cuts the number of decisions you need to make before you start writing. It doesn't replace the idea, the evidence or the audience. And the same engine can attract, build authority or convert, depending on its subject and next step.

THE SEVEN ENGINES AT A GLANCE

Engine	Use when you have…	Structure	Lead potential
1. Story	A real sequence of events that clarifies a decision	Situation → tension → choice → consequence → interpretation	High: shows how you think in situations buyers recognize
2. How-to	A bounded task the reader can perform	Outcome → prerequisites → steps → quality check → limit	High: shows usefulness; leads naturally to implementation help
3. List	Distinct signals, mistakes or checks	Unifying rule → genuinely different items → priority	Medium–high: great for diagnostics
4. Contrarian	A familiar recommendation that fails under clear conditions	Common advice → missing assumption → counterexample → better rule → boundary	High: signals judgment
5. Trend	A verified current change affecting a buyer decision	Source → what changed → implication → what to check	Medium: timely, but perishable
6. Lessons learned	A genuine change in how you think	Old belief → evidence → revision → application	High: credible and human
7. Conversation	A real open question for people with experience	Context → your current view → specific question	Medium: builds relationships and research

Engine 1 · Story

Use a story when a real sequence of events makes a decision easier to understand. The lead potential comes from showing how you think, in circumstances your buyers recognize.

Example: a genuine account of discovering that a delayed project had no internal owner: what you first assumed, what changed your diagnosis, what you did differently. Don't stretch one incident into a universal law.

Template: "We expected [outcome]. Then [observable event] happened. We considered [options] and chose [action] because [constraint]. The result was [supported outcome]. The lesson applies when [boundary]."

Engine 2 · How-to

Use a how-to when the reader needs to complete a bounded task.

Example: "Before your next proposal, write down the decision owner, the review date and the evidence each reviewer needs. Confirm the unknowns on the call. Put the agreed next action in your recap." Specific enough to try today.

Template: "To [task], first check [prerequisite]. Do [step], then [step]. You'll know it's ready when [test]. If [constraint], use [alternative] instead."

Engine 3 · List

Use a list for distinct items with a unifying rule. Don't split one idea into ten near-duplicates to make the headline look substantial.

Example: Three signs your lead magnet is attracting the wrong audience: most requests come from peers outside your market; follow-up questions are about a different problem; people can't say when they'd use the resource. Each one points to a different repair.

Template: "[Number] signs of [specific condition]. [Signal] means check [cause]. Start with [priority rule]."

Engine 4 · Contrarian

Use this when a popular recommendation breaks under identifiable conditions. Its commercial value comes from better judgment, not controversy.

Example: "Post every day" is poor advice for a consultant whose best material comes from delivery work but whose schedule can't support thoughtful daily writing. Three strong posts a week may produce better material *and* leave time to answer buyers.

Template: "[Advice] makes sense when [condition]. It breaks down when [constraint]. In that situation, choose [alternative] because [mechanism]."

Engine 5 · Trend

Use a trend only when a current change affects a decision your audience has to make. Verify the source. Separate what happened from what you predict. Don't summarize the announcement. Translate it into a decision.

Template: "[Source] announced [change] on [date]. For [reader], the practical question is [decision]. Check [factor] before [action]. My expectation is [inference], especially if [condition]."

Engine 6 · Lessons learned

Use this when you can honestly compare your old model with your current one. It's often more credible than presenting yourself as someone who never got anything wrong.

Example: learning that a polished dashboard doesn't resolve conflicting definitions of a "qualified lead," and that you now agree the definitions before building any report.

Template: "I used to prioritize [choice]. After [real evidence], I now check [factor] first. That changes [action]. I still use the old approach when [exception]."

Engine 7 · Conversation

Use a conversation post to investigate a real question with people who have relevant experience. Give enough context to make a good answer possible, share your own view, and say what would change it.

Example: "For agency owners with a dedicated account manager: which decisions still reach you every week? I'm especially curious about scope changes versus client escalations."

Template: "In [context], I see a choice between [A] and [B]. My current view is [reasoned position]. What have you seen when [specific condition]?"

Choose by material

If you have…	Use the…
A sequence of events	Story
A repeatable task	How-to
A cluster of distinct signals	List
A flawed popular assumption	Contrarian
A verified change	Trend
A revised belief	Lessons learned
An open question	Conversation

Action: one problem, seven premises

Take one buyer problem and write a one-sentence premise for all seven engines. Choose the two where your material is strongest. Save the rest as research questions rather than forcing seven thin posts into your calendar.

Field rule: The engine organizes the idea. It can't replace one.

CHAPTER 7: WRITE LIKE A PERSON WHO UNDERSTANDS THE WORK

> *Voice isn't slang. It's specificity about people, decisions and consequences.*

"Human" writing doesn't mean casual slang, deliberately broken grammar or a personal confession in every opening. A precise explanation often sounds more human than a manufactured story.

Corporate abstraction hides the work. "We empower scalable stakeholder alignment" tells the reader nothing. "Before the project starts, we agree who approves changes and how fast they need to respond" describes something a buyer can picture, and evaluate.

Edit at three levels

- **Idea:** What changes for the reader after reading this?
- **Paragraph:** What does each paragraph contribute? Cut any that don't.
- **Sentence:** Replace vague subjects and verbs with concrete ones.

Before: "It is important to ensure that effective communication is prioritized."
After: "Send the client a weekly note: work completed, decisions blocked, next deadline."

The second version can be acted on, and challenged. That's what makes it credible.

Rhythm: short sentences land a decision. Longer ones show a condition or relationship. A post made entirely of clipped one-line declarations becomes monotonous and theatrical. Mix them.

Strong views, honest boundaries

"Always," "never" and "everyone" usually mean the draft has outrun the evidence. Replace them with the actual conditions. "A weekly review helps when several people depend on the same decision" is less dramatic than "Every company needs this meeting," and far more useful.

You can hold a strong point of view without pretending there are no exceptions: state the recommendation, explain why, and name the condition that would change it. That matters most when your reader knows their own business better than you do.

Use AI as an editor, not an author

Give your assistant the audience, the thesis, your source notes, the facts you're allowed to use and a sample of your voice. Ask it to find vague claims, missing steps and unsupported numbers *before* you ask for a rewrite. And explicitly prohibit invented clients, experiences, quotes and results:

> *"Preserve these facts. Flag anything that needs evidence. Suggest three clearer openings. Do not add experiences, clients or results."*

You're still responsible for the final draft. A fluent paragraph can misrepresent a source or imply a result you never achieved. Keep confidential client information out of tools that aren't approved for it. Anonymizing a name doesn't help if the project, dates and figures are distinctive. (The AI Post Coach in the Implementation System is built around exactly these rules.)

Action: the abstraction hunt

Highlight every abstract noun in a draft. Replace at least five with an actor, an action or an observable result. Then delete any sentence that praises the idea without explaining it.

Field rule: If a buyer can't picture it, they can't buy it.

CHAPTER 8: STORIES THAT HELP BUYERS DECIDE

> *A story earns its place when the event teaches something relevant.*

The reader doesn't need your biography. They need enough context to understand the choice, enough tension to care and enough evidence to trust your interpretation.

Start near the decision. "The project was approved, but nobody could name who was responsible for system access" is much closer to the problem than a paragraph about your passion for operational excellence.

The decision story

Build any story from five questions:

1. What was supposed to happen?
2. What made it difficult?
3. What options existed?
4. Why was one chosen?
5. What changed, and what's still uncertain?

This exposes your **judgment**, which is what buyers are really evaluating. It avoids the common pattern where the author appears, applies a mysterious framework and produces a remarkable result without ever explaining the work.

> The team wanted a faster proposal template.
>
> But the template was already short. The delay happened before anyone opened it.
>
> Every non-standard request went to the founder. Nobody knew which changes an account lead could approve.
>
> A better template might save writing time. It wouldn't remove the approval queue.
>
> The first repair was a decision rule: which changes the account lead can approve, which need review, and what the reviewer needs to see.
>
> Before speeding up a document, check the decision that comes before it.

Illustrative story. It demonstrates a mechanism without claiming a real client result.

Protect the evidence chain

For real cases, keep the starting state, what you did, the time period, how you defined the outcome, and anything else that changed. If inquiries rose while pricing *and* paid distribution also changed, don't credit the content rewrite alone. If a client gave you a number you didn't verify, attribute it to them.

Ask permission before using client names, screenshots, quotes or distinctive details. Without permission, use a clearly labeled composite or a generic process example. Never quietly merge several clients into one apparently real success story.

Emotion belongs in the consequence

Frustration, uncertainty, relief and pride help readers understand why a decision mattered, but the emotion should come from the situation, not from declarations that a routine mistake "destroyed everything." For a founder, being the only person who can approve work means interrupted evenings. For an operations lead, a vague handoff means taking the blame for a delay they couldn't prevent. Those stakes are believable because they're attached to a real workflow.

Action: a 200-word decision story

Write a story about a real professional decision in 200 words. Underline the evidence. Circle the interpretation. Add one sentence about where your lesson might *not* apply. If fact and interpretation blur together, revise before publishing.

Field rule: Buyers don't hire the hero of a story. They hire the judgment inside it.

CHAPTER 9: THE RIGHT-PERSON PRINCIPLE

> *A great post doesn't appeal to everyone. It makes your ideal buyer feel unusually understood.*

Instead of: *"5 ways to improve your marketing."*
Write: *"5 things SaaS founders should stop doing if their pipeline depends on founder-led sales."*

The second one has a smaller audience. It also has a far better one, and that's exactly what we want.

Broad → Specific → Commercially relevant

Broad	Specific	Commercially relevant
"Better marketing"	"More consistent inquiries for B2B consultants"	"Why inquiries from your lead magnet don't match the service you sell"
"Leadership lessons"	"Delegation for agency founders"	"Which approvals your account leads should own before you hire another salesperson"
"Financial tips for startups"	"Cash planning for seed-stage SaaS"	"The three numbers your board will ask about 9 months after your seed round"
"Career advice"	"Interview prep for product managers"	"How senior PM candidates lose the offer in the case-study round"

The final column sits right next to a decision the reader has to make, which is where buying begins.

Commercial relevance doesn't mean every post mentions your offer. It means the **problem territory** connects to work you can credibly help with. A thoughtful post on an adjacent topic can build relationships, but a feed dominated by unrelated topics makes your commercial identity hard to remember.

Start with one audience

An audience definition is only useful when it changes what you write. "Entrepreneurs who want growth" is too broad to decide anything. "Owners of B2B service agencies whose proposals still need founder approval" points you toward recognizable situations, relevant examples and a plausible service.

Pick **one primary audience for your first 30-day cycle.** It's a publishing focus, not a permanent ban on other clients. Changing the buyer, the problem and the offer every week makes your results impossible to read.

The buyer situation statement

> *"I help **[role and business context]** dealing with **[observable problem]** when **[trigger or constraint]**, so they can **[valuable change]**."*

Then add who is **outside scope**.

Example: "I help owners of small B2B agencies whose sales still depend on their daily involvement build clearer qualification, proposal and follow-up routines." *Outside scope:* businesses without a validated offer; companies wanting outsourced high-volume prospecting.

Company size, geography and industry matter only when they change the problem, the purchasing process or your ability to deliver. Don't add filters just because a template has empty boxes.

Build a language bank

Collect the words buyers actually use in calls, emails, support threads, interviews and public discussions. Record the exact phrase, the context, the underlying task and whether you're allowed to publish it. "Every proposal comes back to me" is far more useful than "founder bottleneck optimization."

Ask five people in your audience:

1. What happened the last time this problem came up?
2. What did you try?
3. What made the current approach acceptable until now?
4. What would improvement change?
5. What trade-offs would make a solution unattractive?

Five interviews aren't market research. They're a source of better questions and hypotheses. If every answer describes a different problem, narrow the context or rethink the offer.

The relevance filter

Before drafting any post, complete three lines:

1. **"This is for…"**
2. **"They recognize the problem when…"**
3. **"After reading, they can…"**

If line three is just "feel inspired," ask whether that's really the post's purpose. Inspiration has value, but it shouldn't quietly substitute for a practical promise.

Action: ten topics, three keepers

Turn ten broad topics into buyer situations using the three-column table. Keep the three you can explain with evidence. Show one to a target reader without your audience statement: can they tell who it's for? If not, it's still too generic.

Field rule: Smaller audience, better audience. Write for the person who would pay.

CHAPTER 10: THE AUTHORITY EQUATION

> *Don't tell people you're an expert. Show them how you think.*

Authority is a conclusion the *reader* reaches about your ability to help. Declaring yourself an expert does almost nothing to create it. Showing how you investigate a problem, choose between options and explain the limits gives the reader something to evaluate.

Experience + Evidence + Insight = Authority

Experience	Evidence	Insight
Real contact with the work	Something the reader can inspect	Why the evidence matters

Instead of *"I'm an expert in sales,"* show something like *"We tested four outbound approaches across 137 opportunities. Here's what happened."* (That's the shape of the claim, not a real statistic. Use your own numbers.)

Authority tools, ranked by what they prove

Tool	Proves…	Watch out for…
Documented result	You've produced outcomes like this	Comparability to the reader's situation; permission
Process demonstration	How you work	Making it concrete enough to evaluate
Artifact (a redacted audit, decision matrix or checklist)	Your method is real	Client confidentiality
Experiment	You test rather than guess	Small samples; confounders
Mistake / lesson learned	Judgment and honesty	Turning it into disguised bragging
Strong opinion with a mechanism	You understand cause and effect	Opinions without a "because"
Behind-the-scenes observation	Proximity to the work	Oversharing
Framework	You can simplify complexity	A diagram doesn't validate itself

New practitioners: don't manufacture results to look experienced. Analyze a public example (with clear limits), build a demonstration with sample data, document a small project you actually completed, or publish a reasoned comparison. Say what the evidence shows and what it doesn't. That honesty *is* an authority signal.

The evidence capsule

For any results post, include six things: **context, baseline, action, time period, how you defined the outcome, and a limitation.**

- **Weak:** "We increased conversions by 40%."
- **Stronger (if true):** "In a four-week test, completed inquiry forms rose from 10 of 200 visits to 14 of 200. Small sample, and the traffic mix may have changed, so we can't credit the rewrite for all of it."

That's a 40% *relative* increase and a two-*percentage-point* increase, and knowing the difference is itself a credibility signal. (Hypothetical numbers, used only to show the structure.)

Strong opinions need a mechanism

"More tools won't fix your operations" is familiar and forgettable. "If two teams define a 'qualified lead' differently, a shared dashboard just displays their disagreement faster" explains *how* the problem happens. Follow the mechanism with a decision rule ("agree the definition and owner before choosing dashboard fields"), and the reader can apply your thinking and judge it.

Handle thin evidence honestly

Use "in this example," "my working hypothesis" or "the client reported" when there's a real limit, not as decoration on an exaggerated claim. If the uncertainty undermines your main promise, change the promise.

Remember what each kind of evidence proves. A framework diagram doesn't validate a framework. A screenshot doesn't establish cause. A testimonial doesn't prove typical results.

Action: the proof ledger

Create a ledger with columns for **claim, source, date, permission, limitations and approved wording.** Add five claims you could publish today. Delete any for which you can't find the underlying record. (It's a tab in the Content Engine Tracker.)

Field rule: Authority is shown, not stated. Every claim needs a receipt.

CHAPTER 11: THE PROBLEM-AWARENESS LADDER

> *Two people can have the same problem and need completely different posts.*

One reader hasn't noticed the problem yet. Another has compared providers and wants to know whether your implementation fits their team. Giving both the same educational introduction wastes everyone's attention.

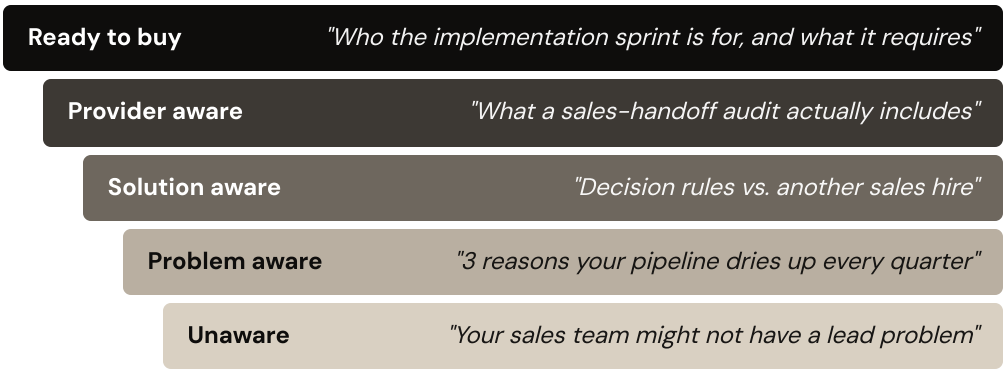

Figure 3. The Problem-Awareness Ladder. A planning aid: people skip rungs, go backward, and sit on different rungs for different parts of a purchase.

Reader state	The post's job	Example	Next step
Unaware	Make a symptom recognizable	"Why a busy founder can still be the slowest stage in sales"	Check one workflow
Problem aware	Explain causes and consequences	"Three reasons proposals wait for founder input"	Use a diagnostic
Solution aware	Compare approaches	"How we built predictable outbound without hiring 10 SDRs"	Compare options
Provider aware	Show fit and evidence	"What changed after we rebuilt a client's outbound system"	Review a sample
Ready to buy	Clarify scope and decision	"We're taking on [real number] implementation projects this quarter for B2B teams with founder-dependent sales"	Discuss the project

(Only state capacity limits that are real. Fake scarcity is a trust leak.)

One problem, climbing the ladder

Suppose you help service businesses reduce onboarding delays:

- **Unaware:** a story showing how small access delays pile up.
- **Problem aware:** a way to tell client-caused delay from internal handoff failure.
- **Solution aware:** automation vs. process redesign vs. account ownership: when each fits.
- **Provider aware:** your deliverables, your boundaries, a sample output.
- **Ready to buy:** timing, pricing logic, responsibilities, decision process.

Education doesn't always have to come before the offer. Some readers discover your profile when they're already shopping for a provider. Make your commercial information *findable*, even when most of your feed teaches.

The awareness mismatch

A cold reader who sees "Book your strategy call" doesn't know what problem the call solves. A ready buyer who reads another inspirational post still can't find your scope. Both are **matching** failures, not writing failures.

The fix isn't a rigid sequence everyone must follow. It's a portfolio with clear routes: a diagnostic post that points to a resource, a case study that points to service details, a profile with an obvious entry point for readers arriving at any stage.

Read signals without overreading them

- "This happens every month" → problem recognition.
- "Have you used this with a remote team?" → evaluation.
- "What would you need from us?" → possible implementation interest.

Each deserves a relevant answer. **None of them proves budget, authority or urgency on its own.** Answer the question first, then ask one proportionate follow-up. Don't interrogate someone because your funnel diagram says they've "entered a stage." (For how to read these conversations in depth, see *The Non-Salesy DM*.)

Action: five rungs, one problem

Write five premises for one problem, one per rung, each with a different next step. Check that your ready-to-buy post contains real offer information, and that your unaware post makes sense to someone who's never heard of your framework.

> **Field rule: Match the post to where the reader is, not to where you want them to be.**

CHAPTER 12: THE FOUR POSTS EVERY BUSINESS NEEDS

> *Attract → Educate → Prove → Convert → Nurture.*

A healthy content strategy isn't "write five viral posts." It's a portfolio of four jobs:

ATTRACTION	AUTHORITY	RELATIONSHIP	CONVERSION
Reach the right new people	Prove your thinking	Deepen connection and community	Make the next step clear

Job	Goal	Best engines	Success looks like
Attraction	New relevant eyeballs	Story, contrarian, list, trend	Relevant new followers, profile visits from your audience
Authority	Trust	How-to, case study, lessons learned, data	Saves, specific questions, "how would this work for us?"
Relationship	Community and retention	Conversation, behind the scenes, milestones	Substantive replies, returning commenters
Conversion	Buying intent	Offer with boundaries, commercial FAQ, objection answer	Fit conversations, qualified opportunities

A feed of only attraction posts becomes entertaining but commercially vague. A feed of only offers gives strangers no reason to believe you.

A starting mix

For a five-post week: **1 attraction · 2 authority · 1 relationship · 1 conversion.** For three posts a week, rotate attraction and relationship while keeping one useful explanation and an occasional clear offer visible.

That's a starting allocation, not a proven ratio. And don't publish five times just to satisfy a calendar. If three good posts leave you time to research, reply and deliver, three is better. **Consistency means reliably doing useful work, not keeping a streak alive at any cost.**

Topic, engine and job are different things

- **Topic** is *what* you discuss: proposal delays.
- **Engine** is *how* you organize it: a story.

- **Job** is *why* you publish it: authority.

Mixing them up makes your calendar repetitive. You can write several posts on proposal delays with different engines, for different awareness rungs, doing different jobs, without ever repeating the same lesson.

A usable planning record has: audience, problem, awareness rung, job, engine, evidence, CTA and review date. Keep it simple. A content database that takes longer to maintain than the posts is a burden, not a system. (The Content Engine Tracker has exactly these columns and nothing more.)

Sell without apologizing, and without repeating yourself

A direct offer is appropriate whenever you can describe the fit and deliver on the promise. You don't need to apologize for selling. Explain the problem, scope, outcome, requirements and next step. Never fabricate scarcity, and never treat your service as a secret revealed only in DMs.

But if *every* post ends with the same pitch, even your best educational material starts to feel like advertising. Vary the next step to match the reader's task. Some posts should end with a useful instruction and no request at all.

Action: label your last ten

Label your last ten posts (or ten draft premises) by primary job. Find the missing job and write one post to fill it. Don't rebalance just to hit a percentage. Say which reader need the new post serves.

> **Field rule: Attract the right people, prove you can help, stay in touch, and make buying easy. Every week.**

CHAPTER 13: CTAS THAT CREATE CONVERSATIONS

> *The CTA should match buyer intent, not your quota.*

Most LinkedIn CTAs are terrible: *"Agree?" "Thoughts?" "Comment YES."* They ask for effort without giving a reason, they produce noisy engagement that says nothing about demand, and LinkedIn has said it's working to reduce exactly this kind of engagement bait.

A call to action is a **continuation of the lesson**. The more effort it asks for, the more clearly the post must have earned it. Asking for a call at the end of an unrelated motivational story leaves a gap the reader has to bridge alone. Most won't.

The CTA ladder

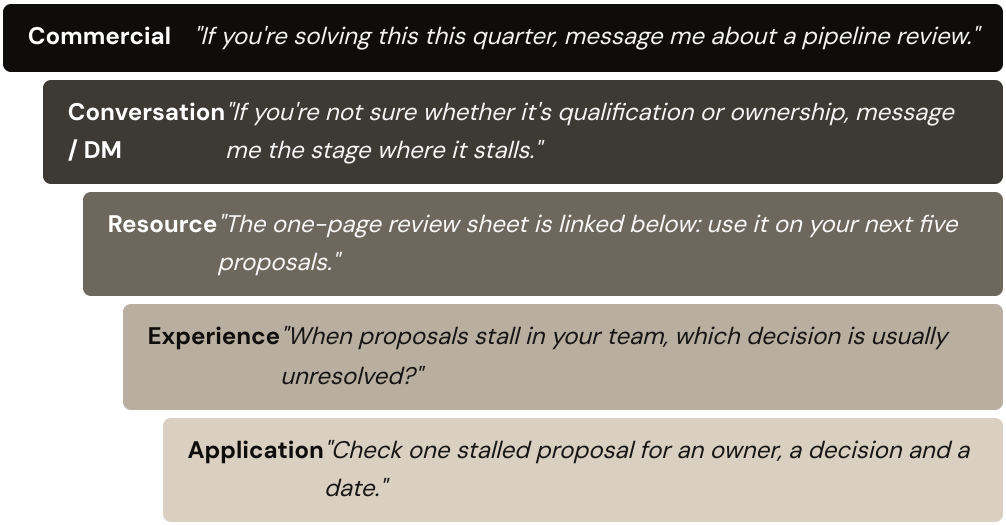

Figure 4. The CTA Ladder. Climb it only as far as the post has earned.

- **Application** serves readers who aren't ready to engage publicly, which is most of them.
- **Experience** invites relevant detail, not agreement. "What's the biggest bottleneck you're seeing?" beats "Thoughts?"
- **Resource** says what the resource does and how to get it.
- **Conversation / DM** works only if you can actually respond usefully and quickly.
- **Commercial** makes it clear this is a paid service. That's honest, and it filters well.

Pick the smallest action that moves the reader's actual task forward. "Smaller" doesn't always mean "a freebie." A buyer with a clear need may prefer your pricing page.

One primary action

A post that asks readers to comment, follow, repost, download, subscribe *and* book a call has given them six competing instructions and, usually, no reason for any of them. Choose one. Secondary routes can live on your profile.

About keyword CTAs ("Comment 'FRAMEWORK' and I'll send it")

A keyword can be a convenient way to deliver a resource. Don't use one just to inflate your visible comment count. It produces noisy evidence about real demand, and it drifts toward the engagement bait LinkedIn says it's reducing. Where a direct link serves the reader better, use the link. **Never make praise, tagging friends or reposting the price of access.**

Say what the next step costs

If a resource needs an email, say so. If a call is 20 minutes, say what it's for and what they'll leave with. If an audit is paid, say that before anyone invests time in a sales conversation. Clear expectations may cut raw responses and improve fit, which is the trade you want.

- **Weak:** "DM me to transform your business."
- **Better:** "Message me if you want the scope for a paid review of where your proposals stall. I'll first check whether your sales process is a fit for it."

Action: three CTAs, one post

For your next post, write an application CTA, a resource CTA and a commercial CTA. Choose the one the body actually earns. If you want the commercial CTA but the post gives no reason to trust the offer, strengthen the **evidence**, not the urgency.

Field rule: Ask for the smallest next step the post has earned, and make its cost clear.

CHAPTER 14: THE LEAD MAGNET POST

> *Don't build a lead magnet that attracts freebie hunters. Build one that advances a buying decision.*

Resource posts can generate extraordinary activity. They can also fill your inbox with people who will never buy anything. The difference is almost always the resource.

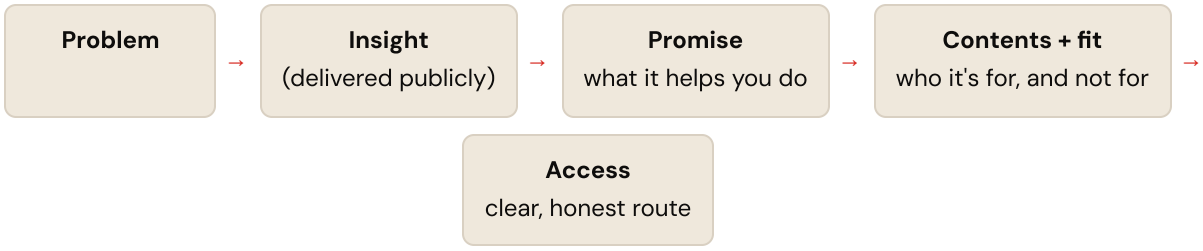

A useful lead magnet solves **a small, real problem next to your paid work**. It helps a suitable reader complete a task, diagnose a situation or make a decision. "The 500 Best AI Tools" will attract hundreds of people who don't need your service. "A one-page worksheet to find where your proposals stall" has an obvious relationship to sales-process consulting.

Design backward from the paid service

1. Write down the **paid outcome** you deliver.
2. Identify the **decision** a buyer must make *before* they'd consider that service.
3. Design the resource around that decision.

Paid outcome	Precursor decision	Good lead magnet	Weak lead magnet
Clearer client onboarding (ops consultant)	Is the delay access, ownership, scope or scheduling?	A handoff checklist	A generic productivity ebook
Better interview performance for PM roles (career coach)	Where am I actually losing interviews?	A structured post-interview reflection sheet	Motivational quotes
Predictable outbound pipeline (B2B agency)	Is our problem volume, targeting or conversion?	A pipeline-leak diagnostic	"100 cold email templates"
Fractional CFO engagement	Do we understand our runway risk?	A 12-month cash-scenario template	"10 finance tips for founders"

The five-part resource post

> If every proposal needs founder approval, check the decision rules before you hire.
>
> The bottleneck is usually "who can approve what," not capacity.
>
> I built a one-page worksheet with five stages, three ownership states and a next-action field. It helps agency owners pick one handoff to fix first.
>
> It doesn't calculate revenue loss or prescribe a full sales process.
>
> The worksheet is at the link below. No email needed.

Notice the **boundary** ("it doesn't..."). A one-page resource shouldn't claim to diagnose an entire business. Overpromising can win downloads and lose trust the moment someone opens the file.

Gated or ungated?

- **Ungated** when the goal is broad usefulness and low friction.
- **Email-gated** when ongoing delivery or a newsletter is genuinely part of the value. Say what they're signing up for, and keep resource access separate from optional promotions.
- **By DM request** only when conversation adds value *and* you can fulfill every request promptly.

Deliver first. "Here's the worksheet you asked for. Start with the stage where work waits longest. If you want to tell me which one you picked, I can help you use it." Never make a discovery call the price of a resource you promised.

Measure the resource, not the downloads

Downloads show demand for *access*, not demand for your service. Track successful delivery, observable use, relevant questions, fit conversations and opportunities. After a sensible interval, you can ask one optional practical question ("Were you able to pick one handoff to review?"). Don't send repeated reminders to people who never asked for support.

Action: the resource spec

Write a spec: **user, task, inputs, output, time required, limitation, delivery method, connection to your paid service.** Give a draft to two target users and watch where they hesitate. Fix the instructions before you promote it.

Field rule: The best lead magnet is the first step of the work you get paid for.

CHAPTER 15: TURNING COMMENTS INTO CONVERSATIONS

> *A viral post creates attention. Your comment section creates relationships.*

Your replies show how you treat people who aren't paying you. They also reveal whether your expertise holds up outside a prepared post. A thoughtful comment deserves a reply to its **substance**, not an automatic invitation to your calendar.

Classify the comment first

Comment contains…	Respond with…
Appreciation	A genuine thank-you. That's enough.
A specific experience	A follow-up question that narrows the situation
Disagreement	A clarification, a correction, or a concession if they're right
A resource request	Fulfillment, promptly
A buying question	A direct commercial answer

- **Bad:** "Thanks! DM me if interested."
- **Better:** "Interesting that you mentioned hiring. Is the bigger issue getting enough candidates, or finding ones with the right experience?"

Now you're having a conversation.

Respond with context

Reader: This keeps happening after procurement gets involved.

Author: Does the delay usually come from new requirements, or from waiting on approval of what was already agreed?

The question narrows things without claiming to know the cause. If they answer, contribute something useful before asking anything else. Don't turn the thread into a questionnaire.

Reader: What do you charge for this?

Author: It depends on scope. Happy to explain the standard review and what changes the price. Would you prefer the details here or by message?

If you have a published price, just share it. Don't hide a simple answer behind an unnecessary call.

Buying signals, and what they don't prove

Signals worth noticing: the reader describes the problem *in their own business*, asks how something would work *for them*, asks about process, timing or price, or asks to talk. Each deserves a direct, relevant answer. None of them proves budget, authority or urgency on its own. Interest is not readiness.

Moving to DM

Move to private messages when the person asks, when the context becomes sensitive, or when a specific exchange would be easier there. Ask first: "This might involve details you'd rather not post publicly. Want to continue by message?" **A public comment is not blanket permission for a sales sequence.**

Your first DM should carry the shared context: "You mentioned proposals stall after procurement joins. Happy to help think it through. Is it new requirements or approval timing?" If they already answered that publicly, don't ask again.

A complete illustrative exchange

Commenter: We have an account manager, but everything still comes back to me.

Author: Which decisions come back most often: scope changes, pricing or client escalations?

Commenter: Mostly scope. Nobody wants to commit without checking.

Author: That's worth looking at as a decision rule. A job title doesn't say what someone can approve. Do you have written boundaries for small changes?

Commenter: Not written down. Can I message you?

Author (DM): Of course. Start with one recent request and what made it hard to approve. You can leave client details out.

Once context is shared, the commercial transition offers a real choice: *"The immediate step looks like defining which changes your account manager can approve. If you want help implementing that across the team, I can explain the paid review. If you just need a starting point, the worksheet covers the first*

decision." It follows an expressed problem, and it doesn't pretend the commenter has already decided to buy.

Follow-up boundaries

If you promised a resource, send it. If you agreed a date, follow up on that date. If a conversation stops without an agreement, one relevant check-in after a few business days is reasonable ("Checking whether you still wanted the scope for the review. If priorities moved, no need to continue"). **After a decline, stop.** Silence isn't a hidden objection you're entitled to overcome.

Where this book hands off

Everything after "Can I message you?" (reading the buyer's state, recognizing which trust question they're answering, choosing the smallest next move, knowing when *not* to send) is the subject of my companion book, *The Non-Salesy DM*. This book gets the right conversations started. That one helps you handle them without pressure.

Action: five replies

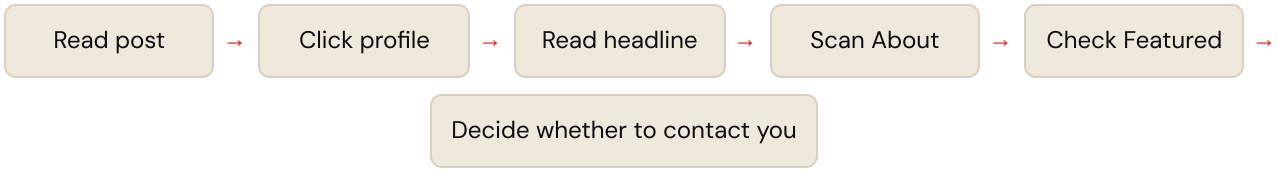

Draft replies to five comment types: appreciation, disagreement, a problem description, a resource request and a price question. Each reply must answer what was actually said before it tries to move anything forward.

Field rule: Reply to the substance, not the opportunity.

CHAPTER 16: THE PROFILE-TO-POST CONVERSION SYSTEM

> *The post makes a claim about your thinking. The profile has to confirm it.*

Someone reads your post. Then, often:

People skip steps and browse in different orders, so treat this as a design model, not a law. But the requirement is universal: **coherence.** If your posts discuss agency sales processes and your profile lists six unrelated services, the reader has to do the work of figuring out your relevance. Most won't bother.

Headline

Audience + problem or outcome + method or role.

"Helping B2B agency owners reduce founder dependence in sales | Qualification, proposal and follow-up systems."

Avoid stacking fashionable titles with no connecting idea. A reader shouldn't have to reconcile six identities to understand what you want to be known for.

Banner

Reinforce a memorable problem or principle rather than repeating the headline. *"Where does your pipeline wait for you?"* Keep it legible, and check that your profile photo doesn't cover the important part on mobile.

About section

A practical structure:

1. **"You may be here because..."** followed by two recognizable situations.
2. **"The work focuses on..."** followed by scope.
3. **"My approach..."** followed by process.

4. **"Evidence…"** followed by verified proof or an honest sample.
5. **"Next step…"** followed by one clear route.

Plain paragraphs. Specific achievements only when you can support them.

Featured and the contact path

Pick a small set of assets with distinct jobs: **an entry resource, evidence of your method, service details.** Label them by reader value. "Proposal handoff worksheet" beats "My latest PDF."

Then check every destination on your phone. A broken link, an unreadable page, a vague contact form or a resource that never arrives can waste all the attention your writing earned. **The conversion path includes what happens after the click.**

The stranger test

Show your profile to someone who hasn't heard your pitch. Give them 20 seconds, then ask:

1. Who is this for?
2. What problem does this person solve?
3. What makes that believable?
4. What would you do next?

Their answers are worth far more than "does it look professional?"

Action: the coherence trace

Put one recent post, your headline, your About section and your first destination link side by side. Underline the shared buyer problem. If it changes at every step, pick one coherent path and fix it before you drive more traffic.

> **Field rule: Every click after the post should say the same thing the post said.**

CHAPTER 17: FROM CONTENT TO CLIENT

> *Content reduces uncertainty before a conversation. It can't replace the conversation.*

A lead engine needs a commercial process that can handle the interest it creates. Four checks tell you whether a conversation is worth evaluating further: **problem, fit, decision path and next step.** You need enough information to decide, not a fully completed qualification form.

Qualify through relevant questions

- **Problem:** "What's happening now, and what does it interrupt?"
- **Fit:** "Which part would you want help changing?"
- **Decision path:** "Who else would need to evaluate a project like this?"
- **Timing:** "Is this something you want to address soon, or are you collecting options?"

Ask about resources *in context*, and share your commercial frame first: "The standard engagement is in this fee range and needs these people involved. Is that realistic for what you have in mind?" Never withhold your price while asking someone to disclose their budget.

Someone without budget right now can still be a valuable relationship. They just aren't an opportunity *yet*. Record the difference, and never treat them dismissively.

Discovery calls with an outcome

Before inviting a call, say what it will resolve: "A 20-minute conversation would let us map where proposals wait, check whether it's in scope, and decide whether a review makes sense." Offer a written alternative when the questions can be answered that way.

During the call, cover the current state, the desired change, constraints, previous attempts and the decision process. Reflect back your understanding. Give your recommendation with its boundaries. End with an agreed action, an owner and a date, or a clear decision not to proceed.

Objections are information

They say	A useful response
"We can do this internally."	"That may be the right choice. The worksheet gives you a start. Outside help is most useful when capacity, cross-team decisions or implementation are the blocker. Do any of those apply?"

They say	A useful response
"It's too expensive."	"Is it the available budget, the scope, or uncertainty about the value? If budget's the constraint, let's be direct about it."
"Send me information."	"Sure. I'll send scope, requirements, fee and a sample output. Is there one question you need it to answer?"
"Not now."	"Understood. Is there a point when a reminder would help, or would you rather come back to it yourself?" Then honor the answer.

Reduce scope only when the smaller engagement still works. Never promise the same work at an arbitrary discount.

Close with a clear agreement

A proposal connects the buyer's situation to deliverables, responsibilities, schedule, fee, payment terms, exclusions and acceptance steps. Don't turn a hoped-for business result into a guarantee you can't control. Specify the work you'll deliver and the outcomes you'll measure together. A verbal yes isn't a completed sale: follow the agreed contracting and payment process, then deliver the first promised step.

An end-to-end example (illustrative)

1. A consultant who helps small B2B agencies fix sales handoffs posts about why proposals stall after a positive call. **An agency founder saves it but doesn't comment.**
2. A later post compares two causes: unclear commercial fit vs. unclear decision ownership. **The founder realizes several deals are waiting on internal approval, not another price revision.**
3. A third post offers a worksheet for reviewing five recent opportunities. **The founder requests it.** The consultant records a *resource request*, not an opportunity, and delivers it with an offer to help them use it.
4. The founder replies: *"Three of the five have no agreed review date. We keep sending reminders."* **Now there's a substantive conversation about a real problem.** The consultant suggests a small fix the team can try on its own.
5. The founder asks whether the consultant can make that consistent across the team. The consultant shares the paid review's scope, fee, participation and exclusions. The founder confirms it's a priority and brings in the operations lead. **Now it's a qualified opportunity.**
6. On the call, the consultant learns the team also needs a complex CRM migration, which is outside scope. They separate it rather than quietly absorbing it. The narrower scope is accepted, and the proposal records deliverables, responsibilities, timing and terms.
7. Afterward, the consultant asks what prompted the inquiry. The founder mentions all three posts **and** a peer's recommendation. The record notes content influence and the referral. It doesn't claim

the resource post alone produced the sale.

This is one progression, not a required sequence. Some buyers arrive asking about price on day one. Others use the worksheet and never need paid help. The engine works when every step serves the actual situation.

Action: the opportunity record

Create a one-page record: source post or referral, buyer situation, fit evidence, open questions, stakeholders, timing, next step, agreed follow-up date and status. If you can't fill in the fit evidence and the next step, it's still a conversation. Don't inflate your pipeline.

Field rule: Content starts the decision. A clear, honest process finishes it.

CHAPTER 18: BUILD YOUR CONTENT PILLARS

> *A pillar is a durable area of buyer concern, not a label broad enough to hold the internet.*

"Business," "mindset" and "marketing" don't help you choose tomorrow's post. Pillars exist so that repetition builds **recognition** instead of monotony.

Five sources of material

1. **What you know:** frameworks, checklists, methods.
2. **What you've experienced:** real projects, decisions, mistakes.
3. **What you believe:** reasoned positions, including unpopular ones.
4. **What you've learned:** how your thinking has changed, and why.
5. **What your customers need:** their questions, objections, language.

These are *inputs*. Translate them into **buyer-facing themes** before anything goes on the calendar.

From your knowledge to their decisions

For a consultant focused on agency sales, pillars might be:

1. Diagnosing pipeline problems
2. Clarifying the offer
3. Improving sales-to-delivery handoffs
4. Reducing founder dependence
5. Evaluating implementation choices

Each pillar draws on all five sources. "What I know" produces a qualification checklist. "What I experienced" supplies a real handoff story. "What I believe" supports an argument against premature automation. "What I learned" explains a revised process. "What customers need" reveals the next objection to address.

Don't create a pillar just because you enjoy the topic. Keep a little room for broader interests if they support your professional identity. But the more unrelated territory you cover, the harder it is for a new reader to remember what you do.

The problem bank

Keep a simple bank with five fields: **buyer phrase, situation, decision, available evidence, possible next step.** Capture entries right after calls and delivery work, while the context is fresh.

> **Example record.** *Buyer phrase:* "We get inquiries, but most want something cheaper." *Situation:* a specialist agency attracting early-stage businesses. *Decision:* change targeting, offer or qualifying information? *Evidence:* interview notes and inquiry categories. *Next step:* check the promise in the lead magnet and profile.

That one record can become an **attraction** post about the symptom, an **authority** post comparing causes, a **relationship** question about trade-offs and a **conversion** post describing a focused review. Same problem, four different jobs.

Repurpose by changing the decision

Repurposing should add a new use, not just reformat the same sentences. Turn a case into a diagnostic, the diagnostic into a demonstration, the demonstration into an objection answer, and the objection into an implementation guide. When you revisit a topic, bring a new example, boundary, question or piece of evidence.

A weekly research habit

Spend one short session a week reviewing buyer language, completed work, unanswered comments and changes in your field. Select ideas by audience relevance and evidence strength. A good idea bank contains plenty of material you're choosing *not* to publish yet.

Action: five pillars

Create five buyer-facing pillars. Under each, write three decisions a customer faces and two evidence sources you can access. Remove any pillar that can't produce both a useful post and a plausible connection to your work. (The Content Engine Tracker's Problem Bank tab has these fields.)

Field rule: Pillars are the problems you want to be remembered for solving.

CHAPTER 19: THE 30-DAY LEAD PLAN

> *The first month builds a working process and an evidence base. It's too short to promise revenue.*

Treat your first 30 days as the first learning cycle of an ongoing system. B2B buying cycles are often longer than a month. So judge it by whether the engine works, and let the commercial results mature.

Choose your cadence

	Standard (3 posts/week)	Intensive (5 posts/week)
Posts in 30 days	12	20
Best for	Consultants with delivery work; first-time systematic posters	Operators with time and material to spare
Weekly mix	1 attraction · 1 authority · 1 relationship *or* conversion	1 attraction · 2 authority · 1 relationship · 1 conversion

Intensive weekly rhythm: Monday, story (attraction) · Tuesday, how-to (authority) · Wednesday, contrarian (attraction/authority) · Thursday, case study or demonstration (authority) · Friday, resource or offer (conversion). Swap one slot for a conversation post (relationship) when you need it.

If you publish fewer posts, extend the sequence rather than squeezing out the research and evidence checks. A slower system you can maintain beats an ambitious calendar you abandon in week two.

The Standard four-week sequence

Week	Purpose	Posts	Supporting work
1	Establish relevance	Day 5 symptom · Day 7 method · Day 9 field question	Audience, profile, baseline, proof ledger
2	Demonstrate judgment	Day 12 comparison · Day 14 case/demonstration · Day 16 resource	Build and test the resource; handle replies
3	Connect interest to fit	Day 19 objection answer · Day 21 lesson learned · Day 23 offer	Review conversations and the commercial path
4	Improve from evidence	Day 25 sharper field question · Day 27 method variation · Day 29 commercial FAQ	Diagnose results; design the next cycle

Chapter 26 turns this into daily assignments.

Run one experiment

Start with one question, such as: *"Do posts about proposal ownership attract more fit conversations than broad sales advice?"* Keep the audience and offer consistent, vary the example and engine, and track both reach and the **nature** of responses.

Don't change audience, positioning, frequency, format, offer and CTA all at once and then claim you found "the best hook." You won't know what worked.

Plan your response capacity

Before a resource post, estimate how many requests you can fulfill and how fast. Prepare the resource, the access instructions and the delivery message, and test the link on a phone. Before an offer post, make sure you can deliver the scope and onboard a client. If capacity is limited, say so honestly. Never invent a scarcity story.

A sustainable time budget

A starting week: **45 minutes of research, two 60-minute drafting and editing sessions, three short reply sessions, 30 minutes of review.** Track your actual time for two weeks before deciding whether content is "worth it." If you only have 90 minutes a week, publish one strong post, reply carefully and review a few signals.

Action: put it on the calendar

Put your publication dates and four review sessions on your calendar now. Give each post a buyer problem, a primary job, an evidence source and a CTA. If any field is unknown, resolving it becomes a task before publication.

> **Field rule: Consistency means reliably doing useful work, not keeping a streak alive.**

CHAPTER 20: THE POST CREATION WORKFLOW

> *Separate finding, drafting, editing, publishing and learning.*

Mixing these creates friction: you research while polishing a sentence, invent a hook before you know the point, and check analytics while trying to finish the body. Here's the workflow in fifteen steps.

THE 15-STEP WORKFLOW

#	Step	What "done" looks like
Find		
1	**Find the problem**	A specific buyer situation from your problem bank: who has it, and when
2	**Find the insight**	The explanation or decision rule in one sentence. "This is important" doesn't count.
3	**Find the story or demonstration**	Evidence that supports the insight. If there's no true story, use a labeled hypothetical or a process.
4	**Write ten hooks**	Varied angles, each a promise the evidence can keep
Build		
5	**Choose the strongest hook**	Clear relevance and a deliverable promise beat theatrical language
6	**Write the rehook**	Adds context, tension or a preview; no repeated meaning
7	**Build the body**	Pick an engine; each paragraph answers the question the last one raised
8	**Add proof**	Example, artifact, source or measurement details, with permission and limits checked
9	**Add the payoff**	What the reader now understands or can do; it resolves the hook
10	**Write the CTA**	Matches awareness and the post's job. No CTA beats an irrelevant one.
Ship and learn		
11	**Remove fluff**	Unsupported superlatives, repeated claims and self-praise gone
12	**Format for mobile**	Preview it; the opening makes sense on its own; links clearly labeled
13	**Publish**	Right account, audience, attachments and destination; timed for your readers *and* your availability to reply
14	**Engage**	Answer relevant questions; correct misunderstandings; never fake activity

#	Step	What "done" looks like
15	**Analyze**	Consistent observation window; metrics *and* conversation quality; the next question this post revealed

The ten-line post brief

Before writing, fill in: **reader · situation · awareness rung · primary job · thesis · engine · evidence · boundary · payoff · CTA.** Ten lines can save an hour of unfocused editing.

> **Example brief.** *Reader:* agency founder. *Situation:* proposals need founder approval. *Awareness:* problem aware. *Job:* authority. *Thesis:* unclear decision rights may be creating the queue. *Engine:* how-to. *Evidence:* sample decision matrix. *Boundary:* doesn't fix poor offer fit. *Payoff:* define approval rules for one recurring request type. *CTA:* apply the check to a recent proposal.

The quality gate (V.A.L.U.E.)

Before publishing, mark each as **ready / revise / unknown**:

- **Visibility:** Can the intended reader recognize the subject in the opening?
- **Attention:** Does the rehook add meaning, and does the body keep the promise?
- **Legitimacy:** Are claims supported, examples labeled, limits proportionate?
- **Usefulness:** Can the reader make a better decision or complete a task?
- **Engagement-to-Action:** Is the next step clear, appropriate and working?

Don't add the marks up into a pretend virality score. Fix every "unknown" fact and every broken destination before you publish. A beautiful phrase doesn't make up for a missing explanation.

Action: time one post

Run one idea through all fifteen steps without skipping the proof check. Record the time each phase takes. If drafting is slow because evidence is missing, improve how you capture it. If editing is slow because the thesis keeps changing, improve the brief.

Field rule: Don't write a hook until you know the point.

CHAPTER 21: MEASURING WHAT ACTUALLY MATTERS

> *Measure the business without inventing attribution.*

Measurement exists to help you decide what to do next. A dashboard full of activity counts can distract from that job. Start with a small set of clearly defined measures, and keep the definitions stable long enough to compare them.

LinkedIn's own analytics define **impressions** as the number of times a post was shown and **members reached** as the distinct members who saw it. LinkedIn describes these as estimates, and some counts can include repeat or your own activity. Check the current definitions in your analytics before comparing numbers.

Three layers

Layer	Measures	What it tells you	What it doesn't
Distribution	Impressions, members reached, audience data	Exposure	Whether viewers fit
Response	Relevant comments, substantive DMs, resource use, profile and link activity	Interest and friction	Buyer qualification
Commercial progression	Fit conversations, qualified opportunities, proposals, won work, cash collected	Business results	Which single post "caused" it

A like is a lighter signal than a detailed description of a problem, and neither automatically qualifies anyone.

Define the denominator

- **Fit conversation rate** = fit conversations ÷ substantive new conversations. (Six of twelve = 50%. It is *not* six divided by every reaction and impression.)
- **Opportunity rate** = qualified opportunities ÷ fit conversations.
- **Proposal win rate** = won ÷ *decided* proposals. Report open proposals separately.
- **Landing-page conversion** = completed resource requests ÷ measured page sessions. Don't silently swap in LinkedIn link clicks.

Always state the time period and cohort, especially when decisions happen weeks after the post.

AN ILLUSTRATIVE MONTHLY RECORD (INVENTED FOR INSTRUCTION; NOT A BENCHMARK)

Measure	Count	What it means
Posts published	12	Output, not success
Substantive new conversations	12	People discussing a real issue
Fit conversations	6	Relevant audience and problem
Qualified opportunities	3	Fit + decision path + agreed next step
Proposals sent	2	A commercial proposal made sense
Won	1	Met your documented win definition
Open	1	Still undecided. Not a loss.

Track contribution, not sole cause

Ask every new prospect how they found you and what made them reach out. Record the first known touch, any content they mention, the immediate trigger and other channels involved. Real paths look like this: a post, a referral, several articles, then a reply to an email. Report **sourced** and **influenced** opportunities separately, under definitions you write down, and never credit the full deal to every channel that touched it.

Revenue isn't profit. Compare cash collected with delivery costs and with the time content and conversations take. Pipeline value isn't cash either, and an arbitrary close probability doesn't make it cash.

Diagnose the pattern

Pattern	Likely area to inspect
Low reach, but relevant responses	Distribution or audience size
High reach, poor fit	Topics too broad; positioning drift
Relevant profile visits, little contact	Offer clarity or next step
Many resource requests, little use	The promise, the audience or the resource itself
Calls with poor fit	Qualification or targeting

These are hypotheses. Read actual examples before changing the system. One bad week can be normal variation, timing or a slow buying cycle.

Review rhythm

Take an early snapshot for operational issues, and a consistent later one (say, seven days after publishing) for comparison. Review commercial progression monthly and by cohort over your buying cycle. Keep older posts attached to opportunities they later influence, rather than declaring their value over after a week.

Action: set up the record

Track post ID, audience, job, evidence, responses, opportunities and time spent. (The Content Engine Tracker's Metrics tab calculates these rates for you.) Choose your next experiment from the biggest *documented* bottleneck.

> **Field rule: Measure qualified attention. Everything else is a leading indicator at best.**

CHAPTER 22: 50 HOOK TEMPLATES

> *Structures for an idea you can support. Replace the brackets with a real audience, situation or fact.*

A hook is ready only when the body can keep its promise. The examples show wording, not verified results. First-person versions require your own true experience.

PROBLEM HOOKS

#	Template	Example
01	Your [process] may be waiting for [missing decision].	"Your proposal may be waiting for an owner, not another revision."
02	If [symptom] keeps happening, check [specific point].	"If onboarding keeps slipping, check the handoff before kickoff."
03	[Role], where does [work] stop when you're unavailable?	"Agency founders: where do proposals stop when you're on vacation?"
04	The expensive part of [problem] may be [overlooked consequence].	"The expensive part of a vague brief is the decisions it postpones."
05	Before fixing [visible symptom], check [upstream factor].	"Before fixing follow-up, check what the buyer agreed to do next."
06	Most [audience] don't have a [assumed problem]. They have a [real problem].	"Most freelancers don't have an income problem. They have a pipeline problem." *(from my own feed)*

CURIOSITY HOOKS

#	Template	Example
07	Two [similar things]. One important difference: [factor].	"Two busy pipelines. One important difference: who owns the next step."
08	The [ordinary artifact] reveals more than [obvious metric].	"A proposal recap reveals more than the stage label in your CRM."
09	What happens between [event A] and [event B]?	"What happens between a demo request and the first useful reply?"
10	There's a missing question in [common process].	"There's a missing question in most content briefs: who should act?"
11	I changed my view on [topic] after [real observation].	"I changed my view on templates after watching one hide an unclear decision."

#	Template	Example
12	There are 2 types of [role] right now. (Only one [desired outcome].)	"There are 2 types of AI consultants right now. Only one gets businesses interested." *(from my own feed)*

CONTRARIAN HOOKS

#	Template	Example
13	[Popular advice] works until [constraint].	"'Post more often' works until research disappears from your schedule."
14	You may need less [activity] and more [capability].	"You may need less follow-up and a clearer decision plan."
15	[Tool] can't decide [human question].	"A CRM can't decide what your team means by 'qualified.'"
16	The case against [practice] when [situation].	"The case against daily posting when you have no time to answer buyers."
17	[Good thing] becomes a problem when [condition].	"Customization becomes a problem when nobody can approve the exceptions."
18	We chase [vanity metric] as if it were [goal], then wonder [consequence].	"We chase reach as if it were the finish line, then wonder where the revenue went." *(from my own feed)*

STORY HOOKS

#	Template	Example
19	The moment [small event] exposed [larger issue].	"The moment a missing login exposed a broken onboarding process."
20	We expected [A]. The first obstacle was [B].	"We expected a writing problem. The first obstacle was an undefined buyer."
21	I nearly [decision] before checking [fact].	"I nearly rewrote the offer before checking who downloaded the guide."
22	[Specific moment] changed how I [professional action].	"One unanswered handoff question changed how I run kickoffs."
23	"[Common request you hear]" / Every [role] has heard this one.	"'Can we just have a quick call?' Every consultant has heard this one." *(from my own feed)*

HOW-TO HOOKS

#	Template	Example
24	How to [bounded task] before [next event].	"How to check a proposal's decision path before you send it."
25	A [short resource] for [specific decision].	"A five-question check for choosing your next lead magnet."
26	Start [task] with these [number] questions.	"Start your next content review with these three audience questions."

#	Template	Example
27	Turn [input] into [useful output] with [method].	"Turn one buyer objection into a week of relevant posts."
28	Here's how I'd [goal] with [constraint]...	"Here's how I'd market a startup with a $0 ad budget..." *(from my own feed)*

MISTAKE AND LEARNING HOOKS

#	Template	Example
29	The mistake isn't [surface issue]. It's [diagnosis].	"The mistake isn't using a template. It's skipping the decision behind it."
30	What I'd check earlier in [project type].	"What I'd check earlier in a website messaging project."
31	I stopped assuming [belief] when [evidence].	"I stopped assuming downloads meant demand when people asked about a different service."
32	[Number] mistakes that make [task] harder.	"Three mistakes that make a simple project brief harder to approve."
33	Nothing keeps a [role] humble like [thing].	"Nothing keeps a growth marketer humble like a dashboard." *(from my own feed)*

PROOF AND DATA HOOKS

#	Template	Example
34	In [defined sample], [finding]. Here's the context.	"In our last ten inquiries, one question came up again and again."
35	[Metric] changed from [A] to [B]. What else changed?	"Form completion went from 5% to 7%. What else changed?" *(illustrative)*
36	What [artifact] shows about [decision].	"What this redacted handoff map shows about ownership."
37	We tested [change] under [conditions].	"We tested a shorter brief with one project team."
38	I analyzed [sample] to answer one question: [question].	"I analyzed 100+ AI tools and consultant workflows to answer one question..." *(from my own feed)*

DECISION HOOKS

#	Template	Example
39	Choose [A] when [condition]; choose [B] when [condition].	"Use a checklist for consistency. Use a workshop for unresolved decisions."
40	Before buying [solution], decide [prerequisite].	"Before buying automation, decide who owns the exceptions."
41	The real question is whether [trade-off].	"The real question is whether faster delivery creates more rework."

#	Template	Example
42	When [approach] is worth the extra effort.	"When a custom audit is worth the extra effort, and when it isn't."
43	What would make [recommendation] the wrong choice?	"What would make a new lead magnet the wrong choice?"

RELATIONSHIP HOOKS

#	Template	Example
44	[People doing work], what happens when [situation]?	"Account leads: what happens when a client asks for work outside scope?"
45	Which [decision] still reaches [person] in your team?	"Which pricing decisions still reach the founder in your team?"
46	I'm reconsidering [belief] because [reason].	"I'm reconsidering open-ended discovery calls. Some buyers just need a specific answer."
47	If you only saw my [surface signal], you'd miss the story.	"If you only saw my job titles, you'd miss the story." *(from my own feed)*

RESOURCE AND OFFER HOOKS

#	Template	Example
48	I made [resource] for [reader in a situation].	"I made a handoff worksheet for founders who still approve every proposal."
49	If [problem] is a priority this quarter, here's [clear offer].	"If onboarding delays are a priority this quarter, here's what a process review covers."
50	Who [service] is for, and what it requires.	"Who a content-to-conversation review is for, and what it asks of you."

Use the library deliberately. Choose five hooks for the *same* idea, not five ideas for a hook you like. Remove any that misrepresent the evidence. Record which opening helped readers understand the topic. Reach alone can't tell you why a post worked. (All 50 are pre-loaded in the Content Engine Tracker's Hook Bank.)

CHAPTER 23: 25 REHOOK TEMPLATES

> *Choose the rehook by what the opening still needs: context, mechanism, stakes, a promise or honest tension.*

ADD CONTEXT

#	Template	Example
01	This matters most when [specific circumstance].	"This matters most when the founder is still the final approver."
02	The issue starts after [event], not at [assumed stage].	"The issue starts after the call, when the recommendation moves inside the buyer's team."
03	For [reader], that creates [consequence].	"For an account lead, that creates a queue they can't clear alone."
04	Here's the situation I mean: [concrete scene].	"Here's what I mean: three people agree, and none of them owns the next action."
05	This is about [bounded case], not every [broad category].	"This is about repeat approvals, not every founder decision."

REVEAL A MECHANISM

#	Template	Example
06	Because [cause] happens before [visible symptom].	"Because the missing decision happens before the document is written."
07	The tool records [thing]; it doesn't resolve [decision].	"The CRM records the stage. It doesn't decide who moves it."
08	Every time [event], someone has to [hidden work].	"Every time scope changes, someone has to reconstruct the original agreement."
09	What looks like [A] may be [B].	"What looks like a confidence problem may be missing approval boundaries."
10	The missing link is [relationship].	"The missing link is how a resource request becomes a useful conversation."

ESTABLISH STAKES

#	Template	Example
11	The cost shows up as [observable effect].	"The cost shows up as repeated revisions and missed review dates."
12	That leaves [person] unable to [important action].	"That leaves the account lead unable to commit to a start date."

#	Template	Example
13	You can improve [metric] while [business problem] stays the same.	"You can grow comment volume while audience fit stays exactly the same."
14	The risk is making [decision] with [missing information].	"The risk is hiring before you know which work actually needs an owner."
15	Before you add [effort], check [constraint].	"Before you add another post, check where interested readers go next."

MAKE A USEFUL PROMISE

#	Template	Example
16	Here are [number] checks you can use on [real object].	"Here are three checks for your next proposal."
17	You can test this by [small action].	"You can test this by tracing one stalled deal backward."
18	The goal is to tell [A] apart from [B].	"The goal is to tell a price concern apart from an unclear approval path."
19	Start with [small unit], then decide whether to expand.	"Start with one handoff, then decide whether the whole workflow needs work."
20	By the end, you'll be able to [bounded task].	"By the end, you'll be able to name the next unresolved decision."

ADD EVIDENCE OR HONEST TENSION

#	Template	Example
21	The surprising part was [verified observation].	"The surprising part was how little the template itself needed to change."
22	My earlier assumption was [belief]. The evidence suggested [revision].	Only when the evidence really supports the change.
23	There's one exception worth keeping: [condition].	"One exception worth keeping: some buyers already know exactly what they need."
24	Here's what this example shows, and what it doesn't.	Useful before a small-sample result or demonstration.
25	The practical decision is [choice], not [abstract debate].	"The practical decision is which requests need review, not whether founders should delegate."

Exercise: Pair five hooks from Chapter 22 with rehooks from *different* categories. Reject any pair that just repeats itself. Your final opening should make the topic, the stakes and the direction clearer, in less space.

CHAPTER 24: 25 HIGH-CONVERTING POST STRUCTURES

> *Adaptable drafting templates: a primary job, the inputs you need, a body structure and a sensible next step.*

These aren't performance-tested promises. Replace every bracket, verify every fact, and choose a CTA that matches your real offer and capacity.

#	Structure	Primary job	Gather first
01	The decision story	Authority	A real decision, options, rationale, outcome
02	The bounded how-to	Authority	A task and a completion test
03	The diagnostic list	Attraction / authority	Distinct symptoms and checks
04	The qualified contrarian	Authority	A common recommendation and a real exception
05	The transparent case study	Authority / conversion	Permission, baseline, action, period, result, limits
06	The revised belief	Relationship / authority	A genuine change in your thinking
07	The useful failure	Authority	A real failure and your part in it
08	The milestone with a lesson	Relationship	A real milestone and the work behind it
09	The trend, translated	Attraction / authority	A current primary source
10	The small-data read	Authority	A defined dataset you can use
11	The resource invitation	Conversion (resource)	A tested resource and working access route
12	The reasoned opinion	Authority / relationship	A claim, a mechanism and a boundary
13	The conditional prediction	Attraction / authority	Current signals and the uncertainty
14	The mistake and the repair	Authority	An observable error and its fix
15	Behind the scenes	Authority	A shareable artifact or process stage
16	The honest transformation	Authority / conversion	An observable operational change
17	The option comparison	Authority (solution aware)	Two or three legitimate approaches
18	The objection explained	Authority (provider aware)	A genuine recurring concern
19	The commercial FAQ	Conversion	Accurate offer details
20	The myth with a better rule	Attraction / authority	A belief you've genuinely encountered
21	The annotated teardown	Authority	Permission or a suitable public example

#	Structure	Primary job	Gather first
22	The buyer's decision checklist	Authority (solution aware)	The criteria that affect the choice
23	The field question	Relationship	A real open question
24	The offer with boundaries	Conversion	A deliverable service and honest capacity
25	The follow-up lesson	Authority / relationship	A previous post and genuinely new information

01 · The decision story *(Authority)*

> We expected [outcome].
>
> Then [event] made the plan harder.
>
> The easy answer was [option A]. But [constraint] meant that would leave [problem] unsolved.
>
> We chose [option B] because [reason].
>
> Over [period], we saw [supported result]. We can't credit [uncertain effect] to this alone.
>
> If you're facing [similar condition], check [decision] before [action].

Next step: Invite a comparable experience. Use only with a real story, or label it hypothetical.

02 · The bounded how-to *(Authority)*

> To [task], start by confirming [prerequisite].
>
> First, [action]. Next, [action]. Then, [action].
>
> Check it worked by [observable test]. If [failure condition], go back to [step].
>
> This helps with [scope]. It won't fix [separate problem].

Next step: Ask readers to try it on one real item. Avoid vague verbs like "optimize."

03 · The diagnostic list *(Attraction / authority)*

> [Problem] doesn't always mean [assumed cause].
>
> Check these three signals:
>
> 1. [Signal] → check [possible cause].
> 2. [Signal] → check [possible cause].
> 3. [Signal] → check [possible cause].
>
> Start with the one you can see in [recent example]. The point is to narrow the diagnosis before you buy a solution.

Next step: Offer a worksheet only if it helps perform the check.

04 · The qualified contrarian *(Authority)*

> "[Common advice]" is useful when [condition].
>
> It becomes weak advice when [constraint].
>
> Here's why: [mechanism].
>
> In that situation, I'd choose [alternative] first, because [reason].
>
> If [different condition], the original advice may still be right.

Next step: Ask which condition readers are in. Don't invent a consensus just to oppose it.

05 · The transparent case study *(Authority / conversion)*

> [Business context] was dealing with [problem].
>
> Starting point: [defined baseline].
>
> We changed [specific action] over [period]. The client's part was [responsibilities].
>
> Result: [defined measure]. [Other change or limitation] also matters when reading that.
>
> The useful lesson is [mechanism], especially for [fit condition].

Next step: Offer a sample scope to similar buyers. Never imply the same result is guaranteed.

06 · The revised belief *(Relationship / authority)*

I used to believe [old view].

That led me to [action].

After [real observation], I realized I'd overlooked [factor].

Now I check [question] before [decision].

I still use the old approach when [exception]. What changed is how I choose.

Next step: Ask what changed the reader's approach.

07 · The useful failure *(Authority)*

[Attempt] didn't produce [intended outcome].

My part in that: [specific decision or omission].

The evidence points to [explanation], though [uncertainty] remains.

Next time I'll [changed action] and check [signal] earlier.

If you're about to [similar action], ask [preventive question] first.

Next step: A prevention checklist. Don't use vulnerability as disguised self-congratulation.

08 · The milestone with a lesson *(Relationship)*

We just reached [verified milestone].

The part worth sharing is [decision or process].

[People or conditions] made it possible. [Constraint] shaped how we worked.

The next challenge is [honest limitation].

If you're working toward [related goal], start with [useful lesson].

Next step: Credit contributors accurately. A milestone doesn't prove every tactic around it caused it.

09 · The trend, translated *(Attraction / authority)*

[Source] announced [change] on [date].

For [specific audience], the practical implication may be [inference].

Before changing anything, check [factor one] and [factor two].

I'd act now on [clear action], and wait for more evidence on [uncertainty].

Next step: Link the source. Never recycle old news as breaking.

10 · The small-data read *(Authority)*

> In [sample and period], we saw [finding].
>
> That number means [definition]. It doesn't mean [common misreading].
>
> One explanation: [hypothesis]. Another: [alternative].
>
> Next test: [comparison]. For now, the change we're making is [proportionate action].

Next step: Invite questions about method. Small data can guide a next step; it can't support a sweeping claim.

11 · The resource invitation *(Conversion: resource)*

> If [problem], start by checking [insight, delivered in the post].
>
> I made [resource] to help [audience] do [bounded task].
>
> It contains [specific components] and gives you [output].
>
> It's for [context]. It's not for [exclusion].
>
> Get it here: [access route]. [State any email requirement clearly.]

Next step: Deliver exactly what you promised before offering paid help.

12 · The reasoned opinion *(Authority / relationship)*

> My view: [specific position].
>
> The reason: [mechanism].
>
> Take [example]. In that situation, [consequence].
>
> I'd change my mind if [condition or evidence].
>
> The decision I'd make today: [action].

Next step: Ask for counterexamples from similar contexts, not agreement.

13 · The conditional prediction *(Attraction / authority)*

> I expect [development], if [conditions] continue.
>
> The signals I'm watching: [source-backed observations].
>
> For [reader], preparing means [reversible action].
>
> The prediction weakens if [counter-signal]. I wouldn't commit [large irreversible investment] on this alone.

Next step: Name a review date, and actually revisit the forecast.

14 · The mistake and the repair *(Authority)*

> A common way to make [task] harder: [mistake].
>
> It happens for a reasonable reason: [motivation].
>
> The problem is [mechanism], especially when [condition].
>
> Replace it with [specific action]. Check the fix by [test].

Next step: Ask readers to inspect one example. Never mock people for making the mistake.

15 · Behind the scenes *(Authority)*

> Before we [visible deliverable], we decide [less visible question].
>
> Here's what that looks like: [artifact or explanation].
>
> We include [element] because [reason], and leave out [element] because [scope boundary].
>
> That helps [person] make [decision].

Next step: Share a sample if it's safe. Never expose client information for credibility.

16 · The honest transformation *(Authority / conversion)*

> Before: [specific behavior or state].
>
> After: [specific behavior or state].
>
> The change: [intervention], with [required participation].
>
> What we observed: [evidence]. What we haven't established yet: [longer-term outcome].
>
> That distinction matters because [reason].

Next step: Explain implementation fit. Operational clarity is valuable without a fabricated revenue number.

17 · The option comparison *(Authority, solution aware)*

> Choosing between [A] and [B] starts with [decision criterion].
>
> Choose [A] when [condition]. The trade-off: [cost or limit].
>
> Choose [B] when [condition]. The trade-off: [cost or limit].
>
> If [third condition], neither should be your first move. Start with [prerequisite].

Next step: Offer a decision worksheet. Don't rig the comparison so your service always wins.

18 · The objection explained *(Authority, provider aware)*

> "[Objection]" is a reasonable concern when [context].
>
> Here's what [service or method] does address: [scope].
>
> Here's what it doesn't: [limit].
>
> It's worth considering when [fit]. It's probably wrong when [non-fit].

Next step: Invite a specific scope question. Naming non-fit makes the decision clearer, and makes you more believable.

19 · The commercial FAQ *(Conversion)*

> Three questions about [service]:
>
> Who's it for? [Audience and problem.]
>
> What happens? [Deliverables, sequence, client responsibilities.]
>
> What does it cost and require? [Actual fee or honest pricing logic, timing, requirements.]
>
> If that fits your situation, [clear next step].

Next step: Give enough information to evaluate, not just a calendar link.

20 · The myth with a better rule *(Attraction / authority)*

> "[Belief]" leaves out [important condition].
>
> In [example], following it leads to [consequence].
>
> A more useful rule: [bounded recommendation].
>
> Before applying it, check [question].

Next step: Invite cases where the original rule still works.

21 · The annotated teardown *(Authority)*

> This [page / process / message] is trying to help [audience] do [task].
>
> What works: [specific element and why].
>
> What creates friction: [observable element and likely effect].
>
> My first test would be [change], measured by [signal].
>
> This is an outside view. I don't know [missing internal context].

Next step: Share your evaluation criteria. Never present guesses about someone else's results as fact.

22 · The buyer's decision checklist *(Authority, solution aware)*

> Before choosing [provider or approach], ask:
>
> What problem will this solve first?
> What inputs and participation does it need?
> What evidence would show progress?
> What's out of scope?
> What happens if the assumptions are wrong?
>
> A clear answer matters more than a confident promise.

Next step: Encourage readers to use it with any provider, including you.

23 · The field question *(Relationship)*

> For [specific audience] dealing with [situation]: how do you handle [decision]?
>
> I can see the case for [A] because [reason], and for [B] because [reason].
>
> My current preference is [view], when [condition].
>
> What have you seen in practice? Context like [non-sensitive detail] would help.

Next step: Reply to the answers, and credit useful contributions with permission.

24 · The offer with boundaries *(Conversion)*

> I help [audience] fix [problem] through [service].
>
> It includes [deliverables] over [period].
>
> You'll need [inputs and participation]. It doesn't include [scope boundary].
>
> The fee is [actual fee or range, with assumptions]. First we check [fit criteria].
>
> If you want to evaluate it, [next step, and what happens after].

Next step: State capacity limits only if they're real. Swap vague transformation promises for concrete work.

25 · The follow-up lesson *(Authority / relationship)*

> I recently wrote about [idea].
>
> The replies raised a useful point: [question or correction].
>
> Here's what I'd clarify now: [revised explanation].
>
> The original advice still holds when [condition]. When [different condition], use [alternative].
>
> The better rule: [rule].

Next step: Link the earlier post. Revising a view in public is stronger than defending an overstatement.

The adaptation check. Before publishing any template: the audience is specific, the evidence is yours or attributed, any promised resource exists, every bracket is replaced, and the CTA matches your capacity. Then read the draft without its template label. It should sound like a real contribution, not a filled-in form.

CHAPTER 25: THE VIRAL-TO-LEAD SWIPE FILE

> *Annotated examples: hook, rehook, structure, trigger, audience, value, CTA and lead mechanism.*

The first seven are **original worked examples** written for this book. They aren't reproductions of anyone's posts, and their performance hasn't been measured. "Viral-to-lead" names the intended path, not a claim that they went viral. After them, I annotate openings from **my own feed**.

Read each one twice: first as the intended buyer, then as the writer studying the choices.

Example 1 · Agency founder dependence

Your sales process has an availability problem if every proposal waits for you.

A new template won't decide which exceptions your team can approve.

Start with the last proposal that stalled while you were away. What was the team waiting to find out?

Whether the price could change?
Whether the scope was deliverable?
Whether the client was a good fit?

Those are three different decisions. They need three different rules.

Write one boundary for the most common request: who can approve it, within what limits, and when it comes back to you.

Then test that rule on your next real proposal.

Which decision reaches you most often?

Element	Analysis
Hook	Selects founders who experience proposal delays; reframes it as *availability*
Rehook	Separates document design from decision rights
Structure	Diagnostic list → small test
Trigger	Recognition of a familiar interruption
Audience / job	Agency founders · authority
CTA	Experience: invites real operating context
Lead mechanism	A founder describing repeated scope escalation may be a fit for process work. Answer their situation first. Someone just agreeing isn't an opportunity.

Example 2 · SaaS onboarding

A welcome email can't fix an unclear first task.

If a new user opens the product and still has to figure out what success means, more reminders just repeat the confusion.

Check the first useful action.

Can the user name it? Do they have what they need to complete it? Does the product show what changed when they're done?

For a reporting tool, that might mean connecting one data source and seeing one meaningful report. For a collaboration tool, it may require a second person to join.

The right first action depends on your product's value, not on how easy it is to count the click.

Before rewriting your email sequence, describe the first useful task in one sentence a new user would understand.

Element	Analysis
Hook	Challenges an overly narrow fix
Rehook	Explains the mechanism
Structure	Diagnostic questions + contrasting examples
Audience / job	SaaS founders, product and lifecycle teams · authority
CTA	Application: no lead capture at all
Lead mechanism	The profile carries the onboarding service. A reader asking *how to define the first useful task* can lead to a scoped conversation. No activation result is claimed.

Example 3 · Specialist freelancer positioning

"I can write anything" makes a buyer do too much work.

They still need to know whether you understand the document they're trying to produce.

A SaaS founder who needs a customer story needs interviews, evidence, approvals and a narrative that helps a buyer evaluate the product.

A founder who needs weekly LinkedIn posts needs a completely different process.

You may be great at both. Your service page should make each one easy to evaluate.

Name the reader, the deliverable, the inputs and what a good result looks like. Show one relevant sample.

Specificity helps because it reduces the buyer's translation work.

Open your profile. Can a stranger identify one document you're especially good at producing?

Element	Analysis
Hook	Names a positioning habit in the reader's own words
Rehook	Names the hidden burden it puts on the buyer
Structure	Problem → comparison → decision rule → application
Trigger	Self-recognition, not spectacle
Audience / job	Specialist freelancers · attraction + authority
Lead mechanism	A positioning consultant could connect this to a profile review, but the post is useful without it.

Example 4 · Interview coaching, without inflated promises

Right after an interview, you have a narrow window to capture useful evidence.

"It went badly" is a feeling. It isn't a diagnosis yet.

Write down the questions you remember. Note where you gave a clear example, where you got vague and where the interviewer asked you to clarify.

Then separate preparation gaps from information you simply didn't have.

Couldn't explain a project decision? Practice that explanation. Role needed a skill you haven't used? Decide whether to build it or target a different role.

You can't read the hiring decision from every facial expression.

Use this interview to improve the next one, without pretending you control the employer's choice.

Element	Analysis
Hook	A timely task with a deadline built in
Rehook	Replaces an unhelpful judgment with a diagnostic need
Structure	Reflection method + boundary
Audience / job	Job candidates · authority
CTA	None: the lesson is the ending
Lead mechanism	A related post could offer the reflection sheet. A coaching offer must avoid promising job outcomes the coach can't control.

Example 5 · A resource post with clear fit

> Before adding another sales meeting, check which decision the current one fails to make.
>
> A longer agenda isn't the same as a clearer outcome.
>
> Take one recurring meeting and write down four things: the decision required, the person responsible, the evidence needed and the deadline.
>
> No decision? It may be an update that belongs in writing. Decision with no owner? Inviting more people may make it worse.
>
> I put those four fields into a one-page meeting review sheet for service-business team leads.
>
> It helps you redesign one recurring meeting. It doesn't prescribe your whole management system.
>
> It's at the link below. No email required.

Element	Analysis
Hook + rehook	Make a distinction the body then explains
Value delivered publicly	The four fields: usable with or without the download
Resource promise	Bounded ("one meeting") with an explicit limit
Access	Stated clearly (no email)
Lead mechanism	Requests to implement decision ownership across teams may indicate consulting fit. Downloads alone don't.

Example 6 · A transparent commercial post

If proposal delays keep pulling you back into sales, a focused process review can show you why.

It covers qualification, proposal prep, decision ownership and follow-up.

We start with a handful of recent opportunities and map where work waited, what information was missing, and who could have moved it forward.

You get a prioritized list of changes, each with an owner and a suggested testing order.

It's for service businesses with an existing offer and an active sales process. It's not a substitute for validating demand from scratch.

You'll need to share suitable records and involve whoever owns sales operations.

If you want the scope, timeline and fee, message me about a proposal-process review.

Element	Analysis
Hook	Selects by problem, not by title
Rehook	Names the scope immediately
Body	Method, output, fit, non-fit, participation
CTA	Explicitly commercial, with a clear keyword for the DM
Lead mechanism	Reply with actual scope, timing and price, and don't make them repeat details they already gave you. Use only for a service you can really deliver.

Example 7 · A relationship post with a real question

Account leads: which client requests can you approve without checking with the founder?

I'm interested in the boundary, not the job title.

A team can have experienced people and still route every small scope change through one person. Sometimes that protects margin. Sometimes the limits have just never been written down.

One useful distinction: a change that fits existing capacity vs. one that changes the delivery commitment.

My starting point would be a short list of changes the account lead can approve, with exceptions reviewed together.

Where does that break down in your team? No client names or sensitive numbers needed.

Element	Analysis
Hook	Narrows the respondent group precisely
Body	Gives a reasoned starting view so respondents aren't doing all the thinking
CTA	Invites counterexamples; explicitly protects confidentiality
Lead mechanism	The job is relationship and research. A reply should *not* trigger a pitch. If someone asks for implementation help, evaluate it then.

From my own feed: three openings, annotated

These are real openings from posts I've published. I'm showing them for their structure, not as proof of performance.

> We chase reach as if it were the finish line, then wonder where the revenue went.
>
> Attention gets the credit, but the funnel does the work.

Why it's built this way: a contrarian hook aimed at founders and marketers who over-index on reach. The rehook ("attention gets the credit, but the funnel does the work") names the mechanism in one line, which is this book's thesis compressed. The post then used an analogy ("a viral post is a crowd that gathers for ten seconds") to make the abstract concrete.

> Most freelancers don't have an income problem.
> They have a pipeline problem.
>
> They rely on one source for clients. When that source dries up, so does their income.

Why it's built this way: a problem-reframe hook (#06 in the hook library). It names the reader (freelancers), replaces their framing ("income") with a more useful diagnosis ("pipeline"), and the rehook gives the mechanism in two short sentences. That problem territory sits right next to a service: helping freelancers build a multi-channel pipeline.

> "Can we just have a quick call?"
>
> Every consultant has heard this one.
>
> A client books 15 minutes. 15 becomes 30. 30 becomes 45. And somewhere along the way, that "quick call" turns into a full-blown strategy session.

Why it's built this way: a scene hook using the reader's own everyday language. Instant recognition for consultants. The escalating numbers work as a rehook: the reader feels the problem before any lesson arrives. It's a relationship-and-authority post: it builds rapport through shared experience, then earns

the right to teach something about scoping and paid advice.

Build your own swipe

Pick one example. Replace its audience, problem, evidence and next step with yours. Label each function in your draft (hook, rehook, body, payoff, CTA). If you can't point to the value delivered *before* the CTA, revise the body. If your authority depends on a result you haven't achieved, switch to a transparent demonstration.

CHAPTER 26: YOUR 30-DAY IMPLEMENTATION CHALLENGE

> *Twelve publishing days. Eighteen days of the research, evidence and review that make publishing work.*

This is the daily companion to Chapter 19's Standard plan. The aim is a working lead engine and better judgment, not a promised number of clients. Log every day in the Content Engine Tracker: action, evidence created, reader response, time spent and one adjustment.

Day	Task	Output
1	**Choose the commercial focus:** one audience, one recurring problem, one plausible offer, two exclusions	Buyer situation statement
2	**Collect buyer language:** five real phrases, with source and publication permission	Five problem-bank records
3	**Repair the profile path:** headline, About, Featured, contact route; test every link; run the stranger test	A coherent path + remaining gaps
4	**Build the proof ledger:** five honest claims with sources and limits; draft ten hooks for tomorrow	Evidence bank + chosen opening
5	✍️ **Publish the symptom post:** problem hook + diagnostic list; application or experience CTA	**Post 1**
6	**Read the responses:** reply; separate appreciation from real problems; add language to the bank	Learning note + tomorrow's brief
7	✍️ **Publish a bounded method:** how-to with prerequisites and a completion check	**Post 2**
8	**Specify the resource:** Chapter 14's spec: input, output, limit, access	Resource brief
9	✍️ **Publish a field question:** context + your view + a specific ask	**Post 3**
10	**Review first signals:** audience fit, question quality, time spent. Don't change strategy after three posts.	Baseline + one question to investigate
11	**Build the resource draft:** instructions, worked example, clear output; test with two readers	A testable resource
12	✍️ **Publish a decision comparison:** two legitimate approaches, when each fits	**Post 4**
13	**Prepare a case or demonstration:** run the evidence capsule check	Tomorrow's draft
14	✍️ **Publish the proof post:** readable visuals, attributable results	**Post 5**
15	**Test fulfillment:** full access path on another device; delivery message ready	A working resource route

Day	Task	Output
16	✍️ **Publish the resource post:** five-part structure; value delivered in the post	**Post 6**
17	**Support use:** fulfill requests; ask one optional practical question	Resource-improvement note
18	**Identify fit conversations:** check each against problem, fit, decision path, next step	An honest conversation list
19	✍️ **Publish an objection answer:** when the concern is valid, what you cover, when you're the wrong fit	**Post 7**
20	**Prepare the offer details:** scope, deliverables, timeline, inputs, exclusions, price, next step	A reviewable offer description
21	✍️ **Publish a lesson learned:** a real revised belief, or what this cycle is teaching you	**Post 8**
22	**Rehearse the conversation path:** replies to a price question, an unclear problem, an info request, a polite no	A response guide (not a script)
23	✍️ **Publish the offer:** fit, scope, requirements, a clear evaluation step	**Post 9**
24	**Repair the biggest friction:** trace one real path from post to profile to resource or conversation	One documented fix
25	✍️ **Publish a sharper field question:** compare the discussion with Day 9's	**Post 10**
26	**Draft a method variation:** a new application, not a reworded repeat	Tomorrow's draft
27	✍️ **Publish the improved method:** same success definition as the earlier comparable post	**Post 11**
28	**Review the commercial record:** conversations, fit, opportunities, proposals, wins, losses	An accurate pipeline snapshot
29	✍️ **Publish a commercial FAQ:** who it's for, what happens, what it requires, how pricing works	**Post 12**
30	**Design the next cycle:** one problem to continue, one habit to stop, one experiment to run	Your next 30-day plan

Intensive track: add the Monday-story and Wednesday-contrarian slots from Chapter 19 on non-publishing days, drawing from the hook library and post structures.

Completion review

- ☐ A clear audience and problem guided the feed.
- ☐ The profile and offer support the same promise.
- ☐ Twelve posts were published, or rescheduled for a stated reason.
- ☐ Every factual claim has a source or a stated limitation.
- ☐ The resource works, and access expectations are clear.

- ☐ Replies responded to context, not a blind sequence.
- ☐ Opportunities are distinguished from general engagement.
- ☐ The next experiment targets observed friction.

Review notes. Answer each with an example from the month: the problem that earned the most *relevant* discussion; the evidence that helped someone evaluate you; where the reader's journey broke; one habit to stop; your next experiment and its review date.

CONCLUSION: STOP GOING VIRAL. START BECOMING UNMISSABLE.

A lead engine is a sequence of credible experiences. The post makes a problem clearer. The profile confirms your relevance. The resource helps with a real task. The conversation respects context. The offer explains the work. Delivery keeps the promise.

You can improve every one of those experiences without predicting your next viral post. **That's where your control lives.**

You don't need millions of followers to generate serious business from LinkedIn. I don't have them. You need the ability to consistently earn attention from the right people, show that you understand their problems, and give them a good reason to start a conversation.

So start small and specific. One audience. One problem worth understanding. Write from evidence. Make the opening clear, the body useful and the next step appropriate. Pay attention to what readers reveal. When interest becomes a real opportunity, evaluate it honestly. When it doesn't, leave the person with something useful anyway.

Don't try to become a LinkedIn influencer.

Become the person your ideal buyers already trust before they ever speak to you.

Your next action is concrete: complete the buyer and offer brief, choose one problem, and draft a post that helps someone make a better decision today.

Mayank

WORKSHEET 1: THE BUYER AND OFFER BRIEF

Field	Your answer
Primary reader: role, business context, constraints	
Recognizable situation: what happens that makes the problem visible?	
Trigger: why might they address it now?	
Desired change: what improves, in practical terms?	
Offer connection: what work can you credibly deliver?	
Exclusions: who or what is out of scope?	
Evidence available today	
Appropriate next step: what can the reader do without guessing?	

Worked example: agency owner · proposals depend on founder approval · a growing team exposes the queue · clearer decision ownership · a bounded sales-process review · unvalidated offers out of scope · sample diagnostic plus permitted real work · review scope and fit.

WORKSHEET 2: THE POST BRIEF

Field	Your answer
Post ID and date	
Reader and situation	
Awareness rung	Unaware / Problem / Solution / Provider / Ready
Primary job	Attraction / Authority / Relationship / Conversion
Single thesis (one sentence)	
Engine	Story / How-to / List / Contrarian / Trend / Lesson / Conversation
Evidence source	
Hook	
Rehook	
Three body points	
Payoff	
Boundary (where this doesn't apply)	
CTA (rung) and working destination	
Review date and the signal you're watching	

Fill this in before polishing. If the thesis changes while drafting, update the brief and recheck the hook.

WORKSHEET 3: THE V.A.L.U.E. EDIT

Check	Question	Ready / Revise / Unknown
Visibility	Can the intended reader recognize the subject in the opening?	
Attention	Does the rehook add meaning, and does the body keep the promise?	
Legitimacy	Are claims supported, examples labeled, limits proportionate?	
Usefulness	Can the reader make a better decision or complete a task?	
Engagement-to-Action	Is the next step clear, appropriate and working?	

Don't add up the marks into a pretend virality score. Fix every "unknown" fact and every broken destination before you publish.

The V.I.R.A.L. → L.E.A.D. one-pager

Inside the post (V.I.R.A.L.)		After the post (L.E.A.D.)	
Voice	Sound like a human who understands the work	**Lead**	Create a reason to continue the relationship
Intrigue	Earn the next line (hook + rehook)	**Engagement**	Start a real exchange, and reply to substance
Relevance	Make the right reader see themselves	**Alignment**	Check whether your help fits
Authority	Experience + evidence + insight	**Discovery**	Move the right people into a business conversation
Lesson	Leave them able to act		

WORKSHEET 4: THE RESOURCE SPECIFICATION

Field	Your answer
Reader	
Task it helps complete	
Inputs required	
Instructions	
Worked example included?	
Output produced	
Time required	
Limits and exclusions	
Access (ungated / email / DM) and delivery message	
Connection to your paid service	
Test observations (two target users)	

Ready when a suitable person can complete the task without you rescuing every step.

WORKSHEET 5: THE CONVERSATION AND OPPORTUNITY RECORD

Field	Your answer
Person and professional context	
Origin: post, resource, referral (and content they mentioned)	
Problem in their words	
Information already shared (don't ask again)	
Fit evidence	
Open questions	
Decision path and timing	
Agreed next action, owner and date	
Contact preference or boundary	
Status: conversation / fit / qualified / proposal / won / lost / paused	
Sourced by, or influenced by	

If you can't fill in the fit evidence and next step, it's still a conversation. Don't inflate your pipeline.

WORKSHEET 6: THE MONTHLY REVIEW

Question	Evidence from this month
What attracted the *right* audience? (cite posts and responses)	
What helped buyers evaluate?	
Where did the path break: profile, resource, conversation, offer, capacity?	
Which opportunities progressed, with what evidence?	
What's still uncertain (attribution, small samples)?	
What did the work cost (time, money, delivery impact)?	
What changes next month: one experiment, and its review date?	

The pre-publication checklist

☐ One recognizable reader and one primary job.

☐ The opening promises only what the body delivers.

☐ Every example is real, attributed or clearly labeled illustrative.

☐ Numbers include enough context to read them honestly.

☐ Client information and quotes have permission.

☐ The lesson includes a useful action or decision rule.

☐ The CTA matches the reader's likely task and your capacity.

☐ The resource or commercial destination works on mobile.

☐ No bracketed template instructions remain.

THE COMMON MISTAKES REPAIR SHEET

Mistake	Why it hurts	First repair
Broad hooks unrelated to your offer	Attention with little buyer relevance	Rewrite around a recognizable buyer situation
Unsupported result claims	Weakens credibility; misleads	Add evidence, qualify or remove
Every post asks for a call	Asks for more effort than the post earned	Match the CTA rung to awareness
Resource requests counted as leads	Free-item demand inflates the pipeline	Separate requests, conversations and opportunities
Engagement-bait CTAs ("Agree?")	Noisy signal; works against relevance	Ask for experience or application instead
Blind DM sequences after comments	Ignores context and boundaries	Reply to the actual signal
A confusing profile	Readers can't connect the post to a service	Align audience, problem, evidence and next step
Constantly changing strategy	Results become unreadable	Hold one focus for a full cycle
Copying first-person templates	Fiction presented as personal evidence	Use real history or a transparent demonstration
Measuring only impressions	Exposure mistaken for progress	Track fit and commercial progression
Publishing beyond capacity	Research, replies and delivery suffer	Post less; protect quality
Engagement pods / manufactured comments	Inauthentic, and LinkedIn says it acts against it	Distribute through real relevance and collaboration

GLOSSARY

Attribution: the method you use to describe a channel's contribution to an outcome; limited by what you can observe.
Authority: the reader's reasoned confidence in your ability to help, built from experience, evidence and insight.
Awareness ladder: unaware → problem aware → solution aware → provider aware → ready to buy.
CTA ladder: application → experience → resource → conversation → commercial.
Engine: a reusable way of organizing an idea: story, how-to, list, contrarian, trend, lessons learned, conversation.
Evidence capsule: context, baseline, action, period, outcome definition, limitation.
Fit conversation: a substantive exchange with someone whose context and problem plausibly match your service.
Hook / rehook / payoff: the opening that earns attention; the passage that makes it worth continuing; the insight that keeps the promise.
Influenced vs. sourced opportunity: an opportunity a channel contributed to vs. one assigned to it under a documented origin rule.
Lead magnet: a useful resource that solves a bounded task next to your paid work.
L.E.A.D.: Lead, Engagement, Alignment, Discovery: the work after the post.
Post jobs: attraction, authority, relationship, conversion.
Qualified attention: attention from people whose situation makes your expertise relevant.
Qualified opportunity: a relevant problem, plausible fit, a credible decision path and an agreed next step.
Substantive conversation: an exchange with enough context to discuss a real problem, beyond a reaction or compliment.
V.A.L.U.E.: Visibility, Attention, Legitimacy, Usefulness, Engagement-to-Action: the final edit.
V.I.R.A.L.: Voice, Intrigue, Relevance, Authority, Lesson: the work inside the post.

WHAT'S NEXT

Put the engine to work

Your Complete Edition includes the **Implementation System**:

- **Content Engine Tracker:** problem bank, post planner, proof ledger, all 50 hooks, the 30-day challenge and honest metrics, ready to use.
- **AI Post Coach:** turns a buyer problem into a brief, ten hooks, rehooks and a draft using this method, and never invents your experience.
- **Printable Field Kit:** every worksheet, formatted for daily use.

The other half of the system

This book gets the right conversations started. **The Non-Salesy DM** shows you how to turn them into clients without pressure, chasing or scripts.

Want it built and run for your B2B business?

At **ThriveXLabs**, I build and run outbound-led sales and content-to-pipeline systems for B2B companies.

Everything is at revops.eden.so

PUBLICATION NOTES

About this edition. *The LinkedIn Lead Engine: How to Write LinkedIn Posts That Attract Clients, Not Just Likes.* Complete Edition. By Mayank Mishra, ThriveXLabs. 2026.

How to read the frameworks. V.I.R.A.L., L.E.A.D., V.A.L.U.E., the seven engines, the four post jobs, the awareness ladder and the CTA ladder are practical writing and planning tools. They are not validated models of LinkedIn's ranking system, and they don't predict reach or revenue.

On the viral-post study. The concept for this book drew on a large analysis of viral LinkedIn posts. Its dataset and methodology weren't available for verification, so its figures aren't cited as evidence here.

Examples and numbers. Named teaching businesses, conversations, figures and first-person stories are illustrative unless identified as the author's own. Openings marked "from my own feed" are from the author's published LinkedIn posts. Author figures (12.5k users in three months, 1,000+ consultants onboarded, a 46% reply rate across 11,466 cold LinkedIn DMs) come from his own operating experience and describe one business in one period. They are not benchmarks.

Platform references. Statements about LinkedIn's feed direction (relevance, engagement bait, engagement pods, automated comments) and analytics definitions refer to LinkedIn's own published material. Check current versions, as policies and interfaces change:
